Designed and developed by **Dr. Babu B., Team Bpro Consulting & Technologies** · www.drbabu.in · www.bpropms.com. Prepared for Meubel Grande and Royal Group. The live board is at https://claude.ai/artifact/HHjKj4Kdhd256YJDCWPTdJ and the source at https://github.com/BABUKOLLAM/meubel-Incentive-Suite.

Screenshots are from the sample build: every name, branch and rupee figure is generated. Policy values are the 19 September 2026 draft's placeholders until leadership confirms them in Settings.

Contents

Sections in detail

4. The scorecard explained
- 4.1 Attributes and weights per role
- 4.2 The rupee components
- 4.3 Worked example: a salesperson
- 4.4 Worked example: a Branch Manager
- 4.5 Worked example: the team pool

5. Predictions, further push and what lags
- 5.1 Month-end projection
- 5.2 Chance of target
- 5.3 Provisional per-bill incentive
- 5.4 Further push
- 5.5 What lags

6. Leaderboard and gamification
- 6.1 What is built in
- 6.2 Reading the leaderboard
- 6.3 The badge ladder (built in, recognition only)

7. Messages centre
- 7.1 The matrix
- 7.2 The send calendar
- 7.3 What each tailored message carries
- 7.4 Procedure: generate and send a message by hand
- 7.5 Procedure: schedule the sends

8. Settings manual for administrators
- 8.1 Who may edit
- 8.2 The panels
- 8.3 Procedure: change a pool, gate, band or target
- 8.4 Procedure: change scorecard weights
- 8.5 Procedure: export, import and reset
- 8.6 Two administrators at the same time
- 8.7 Procedure: rehearse a month

9. Data inputs: CSV, link and API
- 9.1 Matching people and branches
- 9.2 The sources
- 9.3 Procedure: upload a CSV
- 9.4 Procedure: connect a link or API
- 9.5 Procedure: return a source to sample

10. Admin console
- 10.1 Policy versions
- 10.2 Adjustments ledger
- 10.3 Wirings
- 10.4 Jobs and status
- 10.5 Month close
- 10.7 Archive, statements and payout file
- 10.6 Audit log

🧭 How to read this document

One board pays every role from the same written policy, shows each person their incentive as it builds through the month, and sends the right summary to the right person on WhatsApp or email. This manual explains the whole programme, then walks through every screen: the lenses for leadership, the settings and data inputs for administrators, and the back-end console for the Bpro team.

Where to start

READER	START AT	THEN
MD, Directors, HR	The programme at a glance, Lenses, Top management quick guide	Leaderboard, Messages, FAQ
Branch and Sales Managers	Lenses (branch, team, individual), Predictions, Messages	Leaderboard and gamification
Administrators (tech@bpropms.com, process@bpropms.com)	Settings manual, Data inputs, Admin console	Operating rhythm, RAQ, Sticky notes
Consultant team	Total view, Admin console, Operating rhythm	Everything else

The four call-outs

📌 **STICKY NOTE**
The one thing to remember from the section. Read these alone and you have the programme.

🔍 **LENS**
What to look at on the screen, and how to read it.

⚠️ **POLICY RULE**
A rule the board enforces that no setting can override.

🎮 **GAMIFICATION**
A recognition element: medals, movement, badges. Never a rupee.

Conventions

- **Highlighted figures** inside sticky notes and policy rules are the values that decide a payout; each is editable in ⚙️ Settings unless marked as a policy rule.
- **Figure n.** numbers every screenshot; all are from the sample build, so names, branches and rupee amounts are generated.
- ▶ Procedure marks step-by-step instructions for administrators, to be followed in order; Q marks a question in the FAQ and RAQ.
- **Block colours.** Every card on the board carries a family colour on its top edge and heading: navy for position, teal for charts, green for pushes, red for lags, gold for recognition, sea-green for messages, purple for history, blue for people, brown for policy, slate for admin. A key sits under every page of the board.
- Amounts are Indian rupees with Indian digit grouping (₹1,30,680); lakh and crore are written in words (₹20.62 lakh, ₹1.07 crore); percentages carry one decimal; all numerals are lining figures.
- Each numbered section starts on a new page and can be handed out alone; the contents page numbers match the footer.

1 🧭 The programme at a glance

📌 **STICKY NOTE**

The board turns the Corporate Incentive Structure (19 September 2026 draft) into one number every employee can see every day: *what I will earn this month if I keep going like this, what I can still do about it, and what is holding me back.*

What it is. The Bpro incentive board is a single web page, hosted on the group's own server, that reads the master tracker (orders, CRM, attendance punches, delivery log, collection register, audit sheets, Google reviews) and computes the incentive of every person, team, branch and company of Meubel Grande and Royal Group as the month runs. The same engine writes every WhatsApp message and every email the programme sends, so a figure on the board, in a message and in a month-end statement is always the same figure.

Why it exists. The policy draft defines pools, per-bill rates, discount bands, gates and team achievements. Rules on paper reward nobody until the month is over. The board makes the rules live: a salesperson who gives a 22% discount sees the forfeited share of that bill the same evening, a Branch Manager sees the branch slipping under 85% ten days before the month closes, and the MD sees outlay as a share of SO value before approving payout.

The one-page policy, as the board applies it

RULE	VALUE IN THE SAMPLE BUILD	WHERE IT IS SET
Scorecard pools, monthly	Sales ₹6,000 · CRE ₹4,000 · Logistics ₹4,000 · Back office ₹4,000	⚙️ Settings → Pools and gates
Management pools	BM ₹15,000 · SM and BI ₹10,000, paid on branch achievement, open at 90% of target	Settings → Pools and gates
Team pool	₹20,000 per branch, shared equally at 100% of target with audit ≥ 70	Settings → Pools and gates
Attendance gate	Below 85% attendance the scorecard pay is zero	Settings → Pools and gates
Per-bill incentive (Sales)	Category A ≥ ₹60,000 at 0.8% · B ≥ ₹25,000 at 0.5% · C at 0%	Settings → Policy bands
Discount bands	Up to 12% full · up to 20% 60% · up to 30% 40% · above 30% nothing	Settings → Policy bands
Closing-ratio bonus	+10% at 30% conversion · +5% at 20%	Settings → Policy bands
CRE override	10% of the sales incentive on walk-ins the CRE logged, paid by the company	Settings → Policy bands
CRE follow-up bonus	₹2,000 full at 95% on time, half at 85%	Settings → Pools and gates
Payment rule	Per-bill incentive is paid only on delivery and payment; a cancellation pays nothing	⚠️ fixed in the engine

How data becomes rupees and messages. Feeds land in the tracker, the engine scores every attribute against its target, weights the scores into a scorecard out of 100, applies pools and gates, adds the per-bill incentive and any approved adjustment, and projects the month end. The views, the leaderboard and the messages centre all read that one result. The diagram below shows the path.

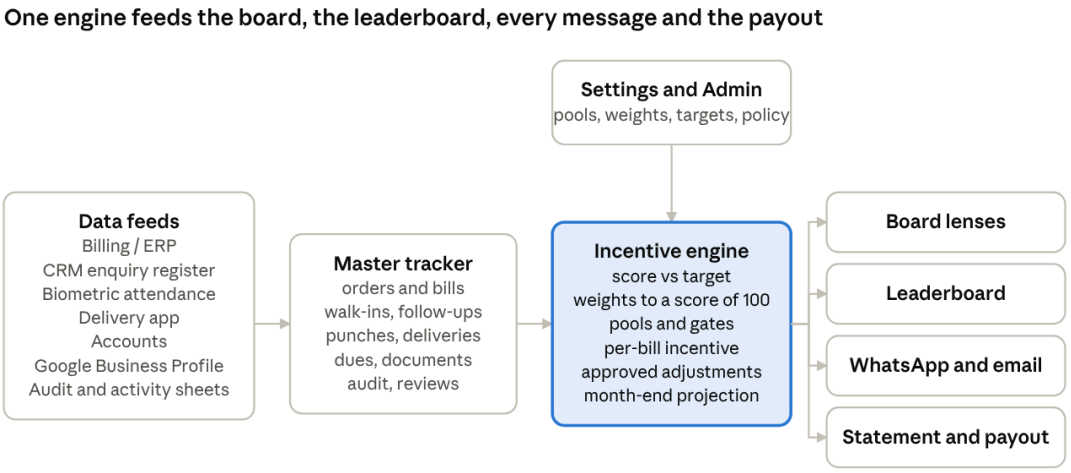

Figure 1. The data path: seven feeds, one tracker, one engine, four outputs

Settings and the Admin console sit above the engine: they change the rules, never the data. Nothing on the right is computed twice.

What is sample and what is real. Every person, branch and number in the screenshots is generated. The *as of* slider replays October 2026 day by day so the flows can be rehearsed. Pools, weights and targets are the policy draft's placeholders until leadership confirms them in Settings, and the figures go live when the feeds in 🛠 Admin → Wirings are connected.

> 🎮 **GAMIFICATION IN ONE LINE**
>
> Medals, rank movement arrows, chance-of-target percentages, priced pushes, spotless-attendance call-outs and a ten-badge ladder with a group badge wall are built in. None of them changes a rupee; section 6 has the rules.

2 🔍 Lenses: Group → Company → Branch → Team → Individual

> 📌 **STICKY NOTE**
>
> Every lens has the same four panels in the same order: *position* (booked, expected, chance), *leaderboard*, *further push* and *what lags*. Learn one lens and you know them all.

The selector bar. The strip under the title switches scope without drilling: Company, Branch, Team and Person dropdowns, then four view buttons (Board, 🏆 Leaderboard, 📣 Messages, ⚙️ Settings) and, for Bpro roles, 🧭 Total and 🛠 Admin. The breadcrumb trail below it steps back up one level at a time. The *as of* slider on the right replays the month day by day; hosted, the board scores the live month and the slider starts at today.

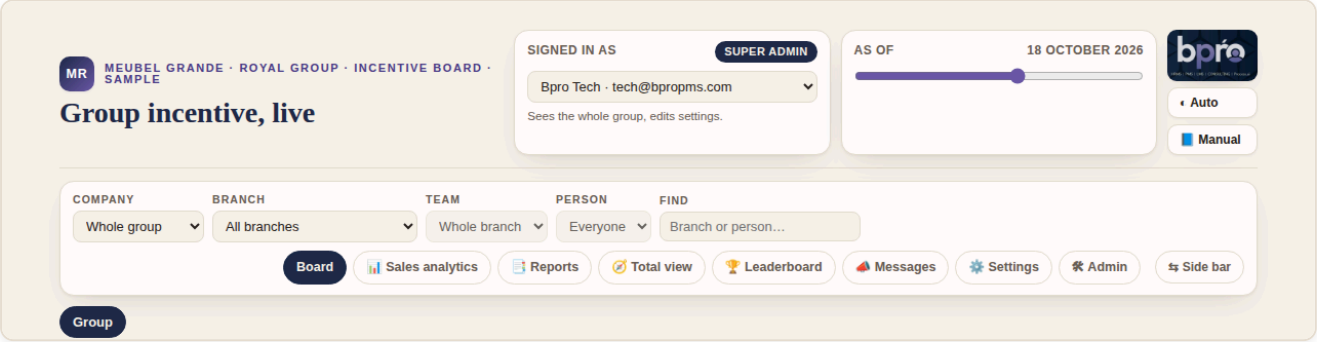

Figure 2. The header: signed-in switch, selector bar, as-of slider and theme toggle

🧰 Everyday controls

What to look at. The app bar carries the brand mark, the page title, the signed-in switch, the as-of slider, a theme button (follows the device, or light, or dark; remembered per browser) and a Manual button. The selector bar has a **Find** box: type a branch or a person and the board jumps there, within the role's scope. A dismissible welcome card explains the board on first use and offers the three places to start. Copies and downloads confirm with a toast, a back-to-top button appears on long pages, and on a phone the view buttons become a fixed bottom bar. Tables longer than 15 rows carry a pager with a rows-per-page choice; exports always take every row. Hover, focus or tap almost anything and a tooltip explains it: tiles, column headings, scorecard attributes with their targets, pills, ranks and movement arrows, badges, chart marks, view buttons, selectors and admin states.

🌐 Group lens

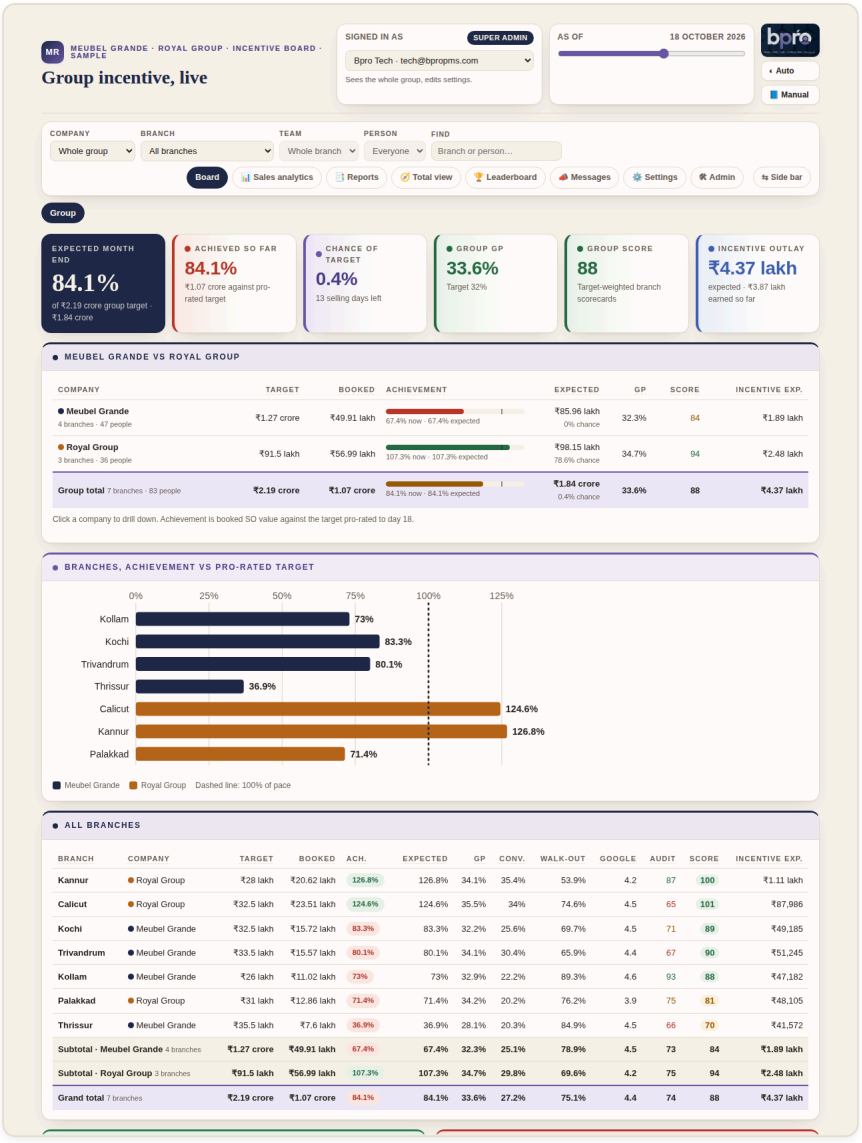

Figure 3. Group lens: Meubel Grande and Royal Group side by side with every branch's achievement

What to look at. The two company tiles and the branch achievement bars. Any bar under the 85% line is a branch whose management pool is at risk; a bar under 100% with audit under 70 means no team pool. The right-hand column lists the top three per role across the group, the group pushes and the group lags.

Who uses it. MD, Directors, HR, the Bpro team and administrators. It is the home page for the group roles.

🏢 Company lens

Figure 4. Company lens: one company's branches ranked, with outlay and policy health

What to look at. The company's achievement, expected month-end SO value and chance of target, then the branch leaderboard with movement arrows against seven days earlier. The *further push* list prices what each branch still needs per day; *what lags* names the attributes that cost the most scorecard points across the company.

Branch lens

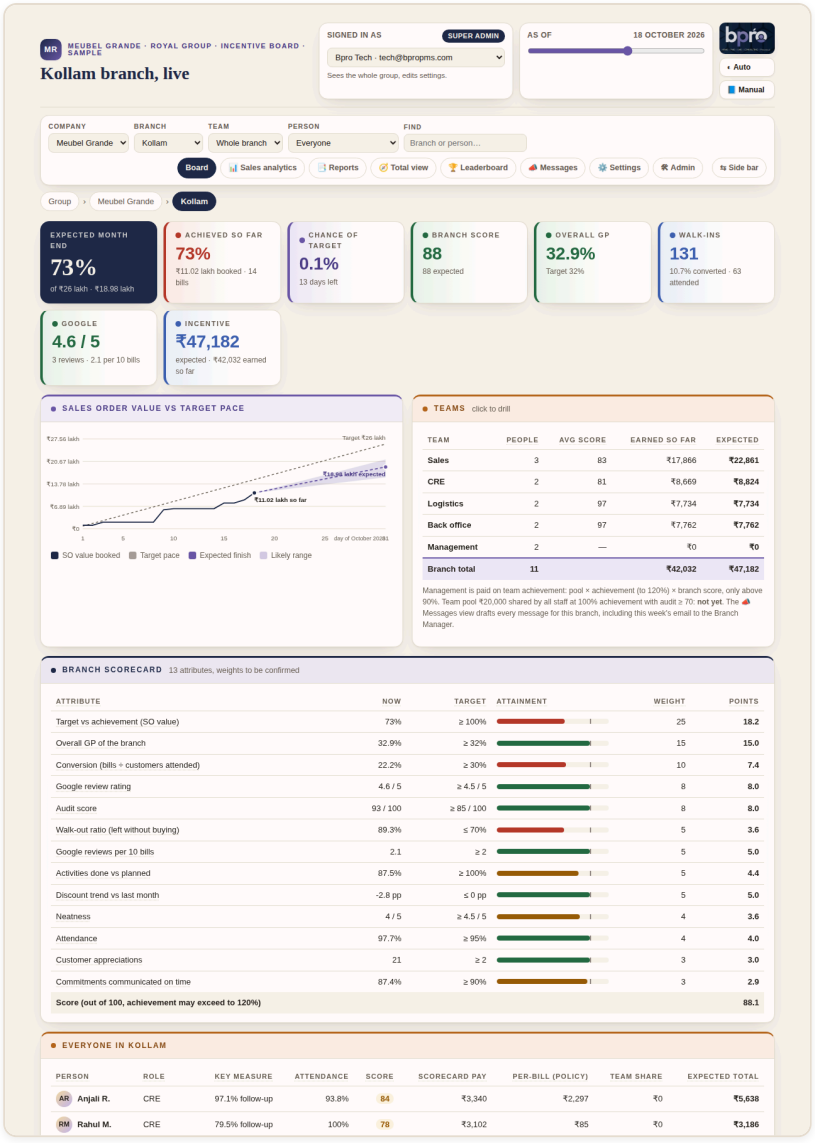

Figure 5. Branch lens: the branch position, its teams, the BM and SM pool status

What to look at. The branch achievement against the 90% management gate and the 100% team-pool gate, GP against the 32% line, the branch scorecard (audit, neatness, Google rating, reviews per 10 bills, walk-out ratio, activities), and the team tiles. The BM and SM pool cards show whether the management pool is open and what it is worth at the current pace.

Who uses it. Branch Managers land here. Directors and the MD drill into it from the company lens.

👥 Team lens

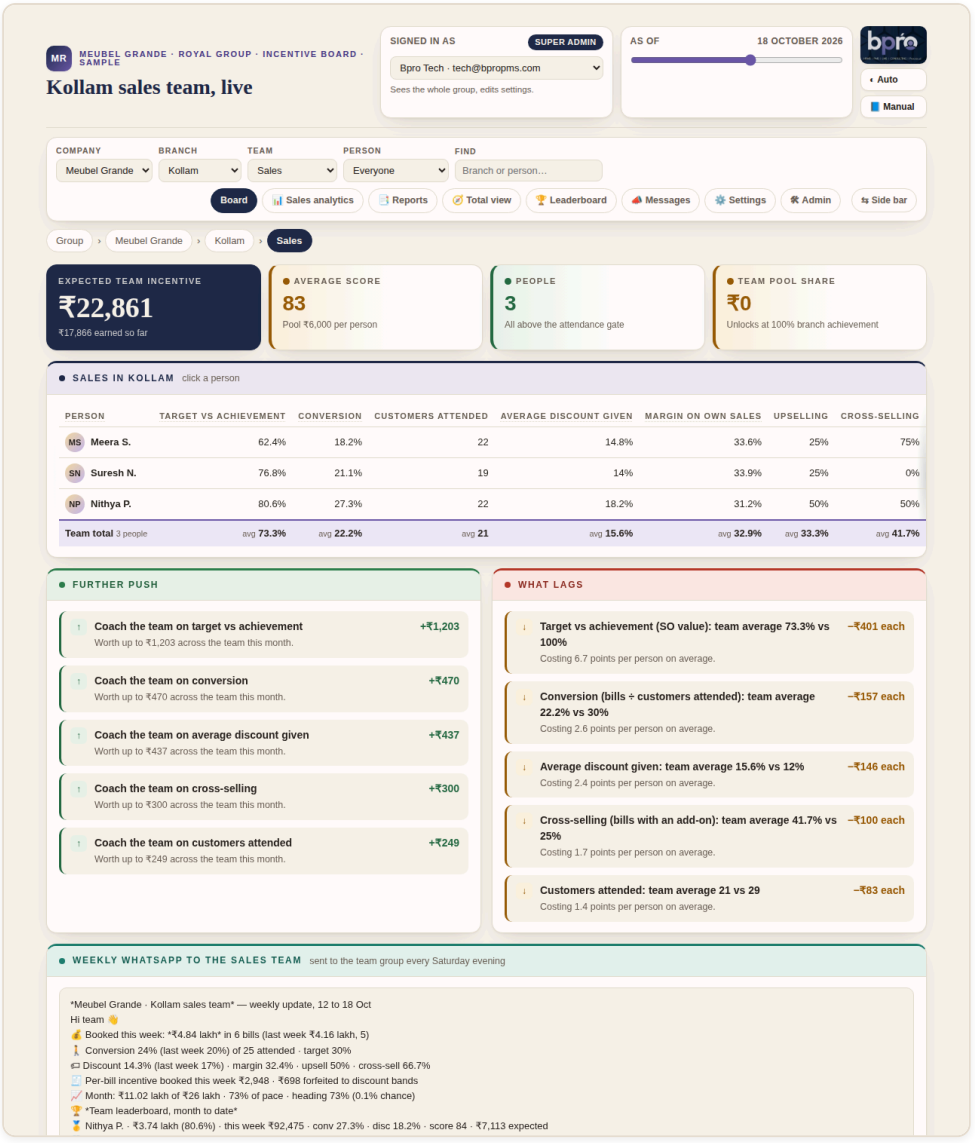

Figure 6. Team lens, Sales: members ranked with SO value, conversion, discount and score

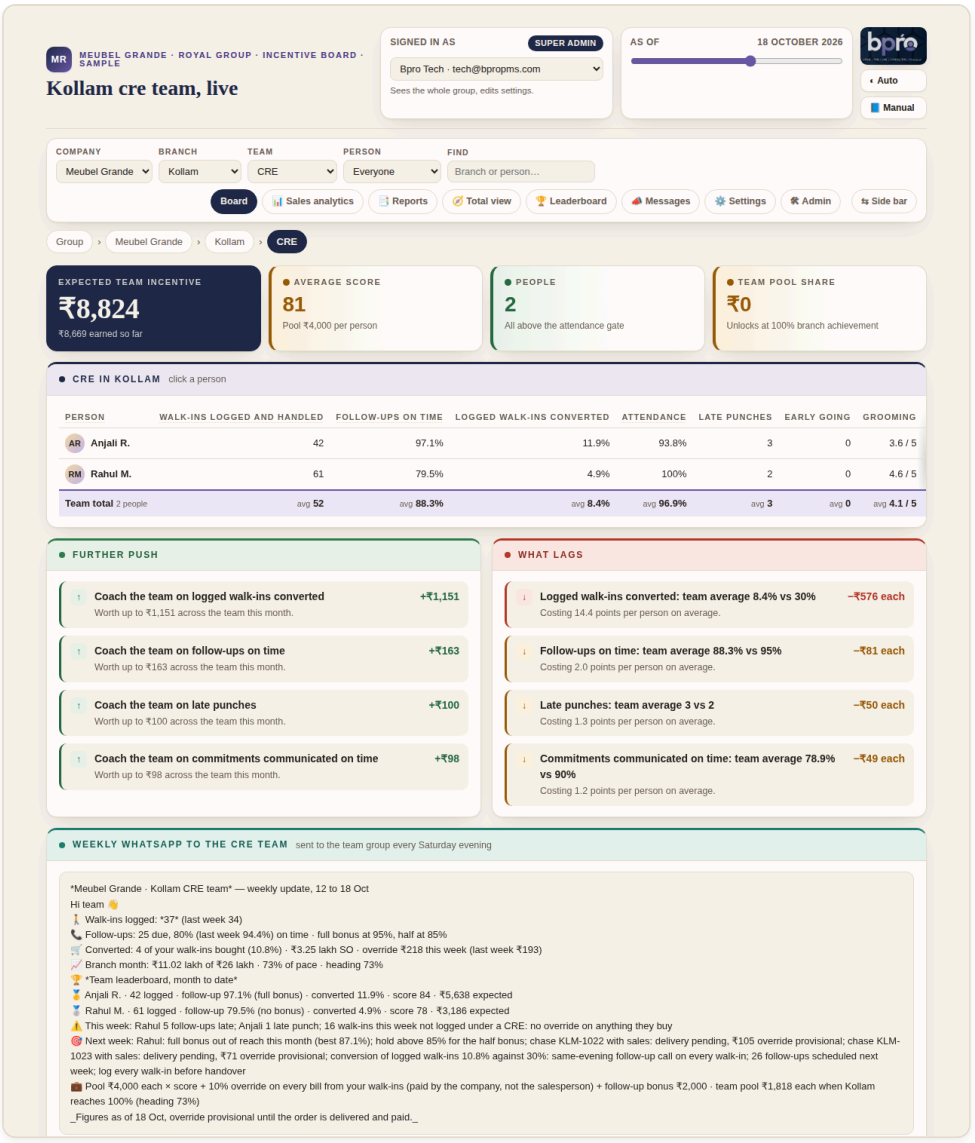

Figure 7. Team lens, CRE: walk-ins logged, follow-ups on time, conversions and override earned

What to look at. The member table is the team's live leaderboard: rank, movement, the team's own measures and the expected incentive. Below it sit the team's messages for the window (daily for Sales, weekly for CRE, Logistics and Back office) with copy-all, then the pushes priced per person and the lags per person. Sales Managers land on the Sales team lens.

🧑 Individual lens

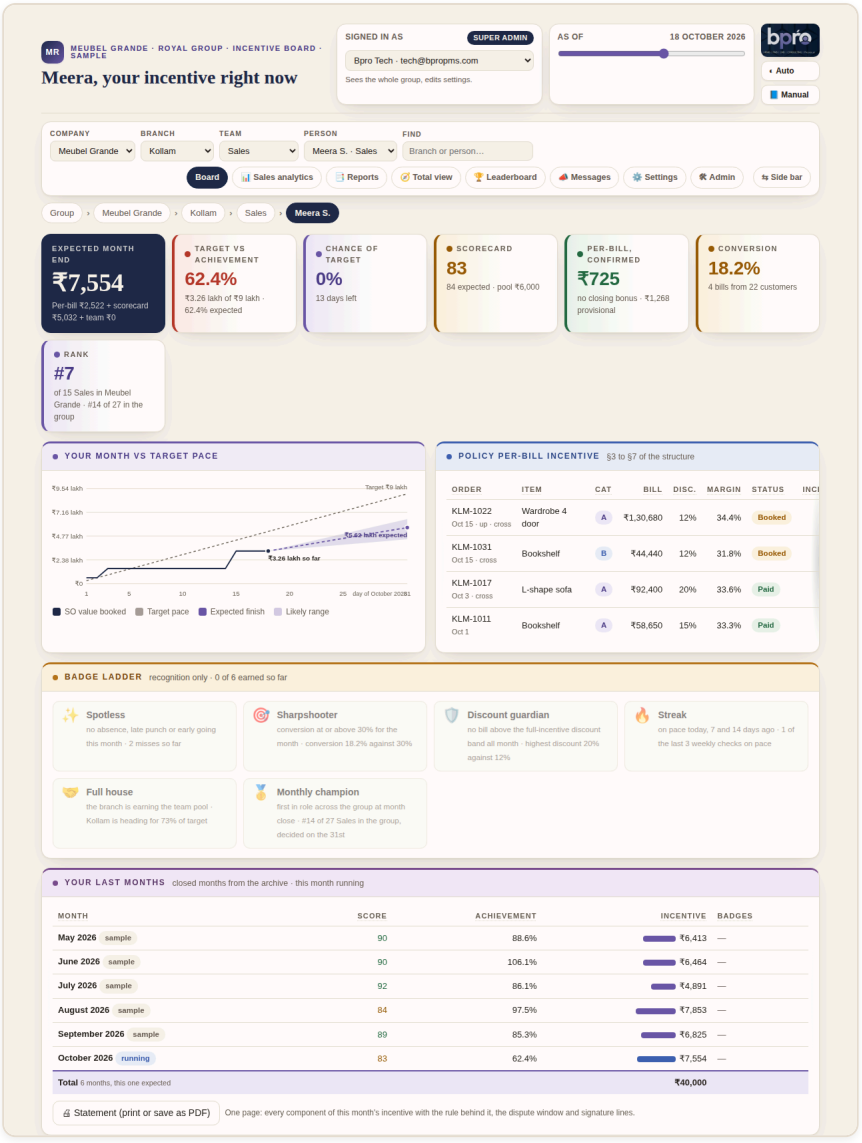

Figure 8. Individual lens: expected incentive, chance, scorecard with every attribute, pushes, lags and the WhatsApp summary

What to look at. The headline tile is the expected incentive for the month with its provisional note. The scorecard lists every attribute with its value, target, points earned and points available, so the person can see exactly where the gap is. *Further push* says what to do next and what it is worth in rupees; *what lags* says what is costing the most. The page ends with the person's WhatsApp summary, ready to copy. Employees see only this page for themselves.

🧭 Total view (Bpro consultant team)

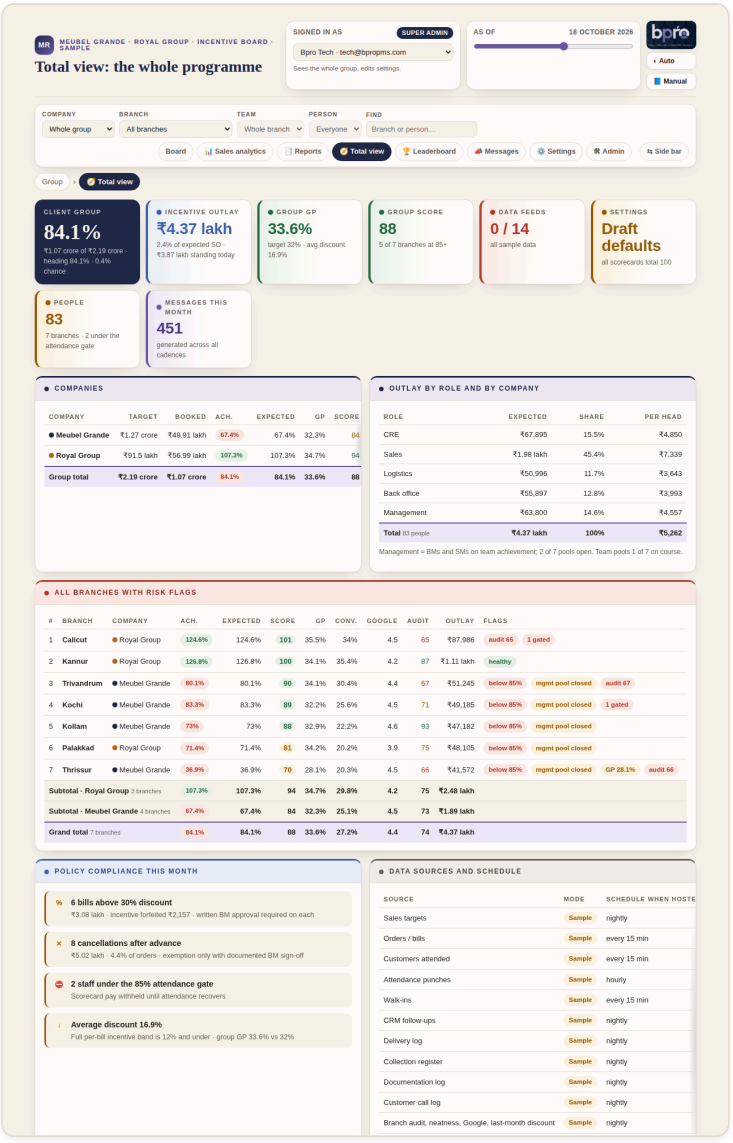

Figure 9. Total view: the whole programme on one page for the consultant team

What to look at. Group achievement, outlay and its share of SO value, data feeds connected, settings state, every branch with its risk flags, policy compliance, the message schedule with recipient counts, users and roles, and the consultant action list. It is the page to open before a client review.

📊 Sales analytics window

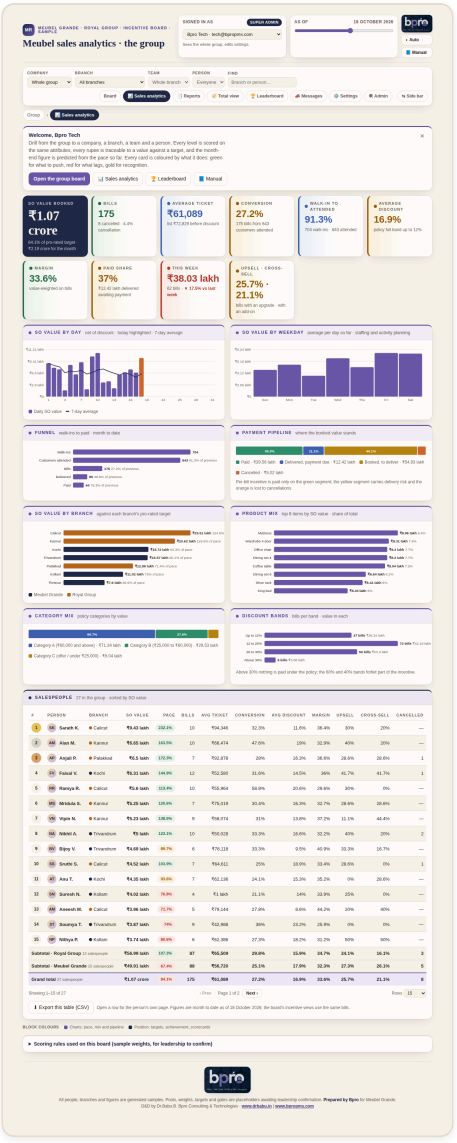

Figure 10. Sales analytics: the Meubel sales picture for the scope, from KPI tiles to the salesperson table

What to look at. A separate window for the sales picture, scoped by the same selector: SO value against the pro-rated target, bills and cancellations, average ticket, conversion, walk-in to attended, average discount, margin, paid share, this week against last, upsell and cross-sell. Below the tiles: SO value by day with a 7-day average and by weekday, the walk-in to paid funnel, the payment pipeline, SO value by branch against pace, the product mix, the policy category mix, the discount bands, and a salesperson table with CSV export. Every role except employees can open it; Branch and Sales Managers see their own branch.

Reports window

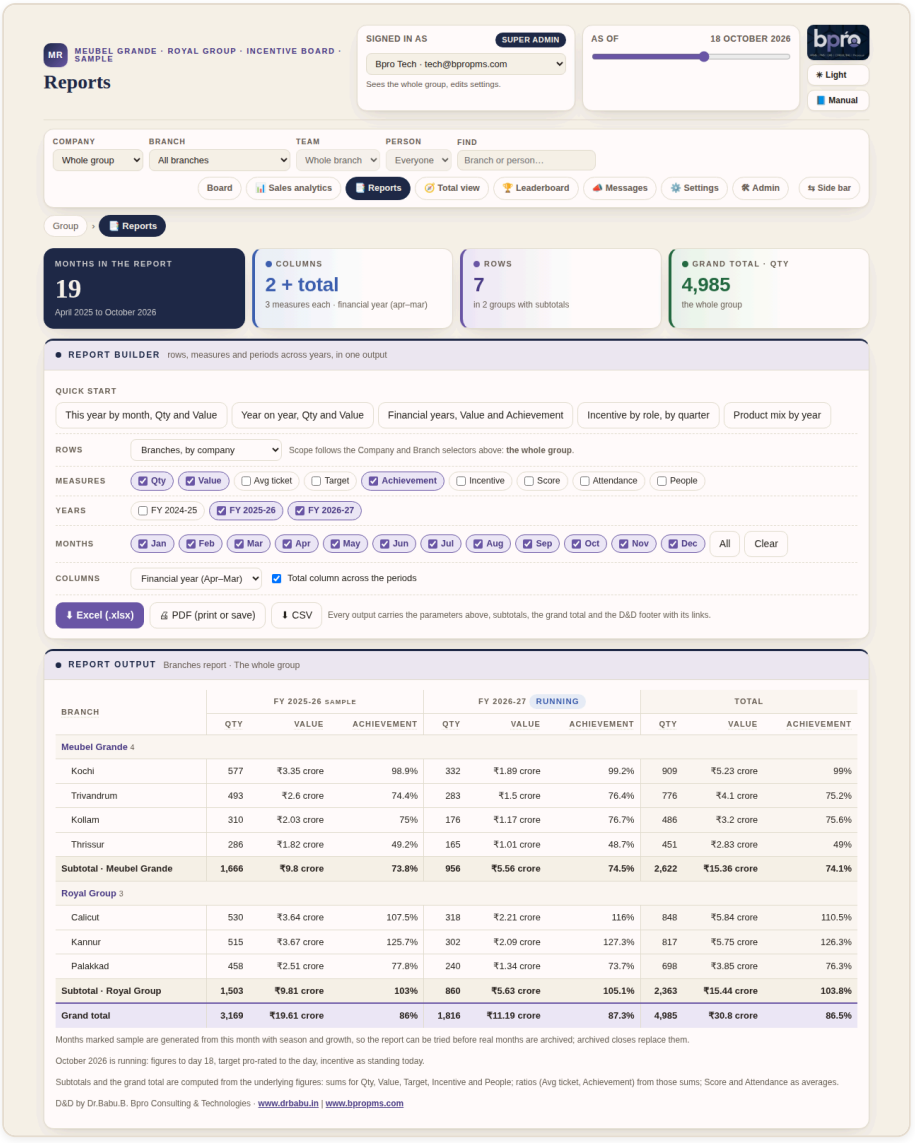

Figure 11. Reports window: rows, measures and periods across years in one output, with subtotals and a grand total

What to look at. One report that combines what used to need several exports. Choose the **rows** (branches by company, salespeople by branch, products by category, incentive by role by company, or everyone by branch), tick any **measures** (Qty, Value, Avg ticket, Target, Achievement, Incentive, Score, Attendance, People), tick one or more **years** and **months**, and choose the **columns**: month, quarter, calendar year or the Indian financial year (April to March). Each period becomes a column group with every measure under it, followed by a **Total** column group across the periods. Rows sit under their group with a **subtotal** after each group and a **grand total** at the foot. Five quick starts set common reports in one click: this year by month, year on year, financial years with achievement, incentive by role by quarter, and the product mix by year.

Outputs. ⬇ Excel (.xlsx) keeps the numbers as numbers in Indian rupee and quantity formats, with the period headers merged, the first column and the headers frozen, the headers repeated on every printed page, landscape printing fitted to the page width and the footer on every page. 🖨 **PDF** prints the same report on A4 landscape, with the footer and its links on every page; a report with many periods prints in column sections (for example January to March, then April to June), each repeating the row names, with the total in the last section. ⬇ **CSV** carries the parameters, the subtotals and the grand total. All three list the parameters used and the time prepared (India time), so a printed report explains itself.

Years and financial years. With *Calendar year*, *Month* or *Quarter* columns the year chips are calendar years; with *Financial year* columns they become financial years (FY 2025-26 is April 2025 to March 2026). Switching between the two keeps the months already covered. Untick every measure and the board asks for one rather than guessing. On the keyboard, Tab moves through the builder and the table scrolls sideways with the arrow keys once it has focus; the row names stay in view while it scrolls.

Months archived before release 1.3 carry sales volumes per branch only. Branch reports show their value and target; salesperson quantities and the product mix are blank for those months, and the report says so in a note. Products are grouped by item within its price category, because the same item can sell in more than one category.

📌 **STICKY NOTE**

Subtotals and grand totals are computed from the underlying figures, not by adding the cells above: Qty, Value, Target, Incentive and People are sums; Avg ticket and Achievement are worked out from those sums; Score and Attendance are averages. The running month is to the day on the slider, with its target pro-rated to the day.

🔍 **LENS**

Until real months are archived, the sample build fills the two years before this month from the current month with season and growth, marked *sample* in every output. A real close archived from 🛠 Admin → Month close replaces its sample month; a board running on the live roster shows only real months.

➕ Subtotals and grand totals on the board

● ALL BRANCHES

BRANCH	COMPANY	TARGET	BOOKED	ACH.	EXPECTED	GP	CONV.	WALK-OUT	GOOGLE	AUDIT	SCORE	INCENTIVE EXP.
Kannur	Royal Group	₹28 lakh	₹20.62 lakh	126.8%	126.8%	34.1%	35.4%	53.9%	4.2	87	100	₹1.11 lakh

Grand total 7 branches		**₹2.19 crore**	**₹1.07 crore**	**84.1%**	**84.1%**	**33.6%**	**27.2%**	**75.1%**	**4.4**	**74**	**88**	**₹4.37 lakh**

Figure 12. Subtotals and the grand total under the All branches table

What to look at. Every table that lists branches, people or money ends with its totals: company subtotals and the group total under All branches and the risk-flag table; the team subtotals and the branch total under Everyone in a branch; the team total under each team; company or branch subtotals under the salespeople in Sales analytics; a total under each leaderboard tab; the net effect of approved and pending adjustments under the ledger; and a total across the months in each history card. The totals stay put when a long table is paged, and every CSV export includes them.

🔏 Logo, QR code and verification on every download

What to look at. Every output the board issues carries the Bpro logo and its own proof of origin. Reports (PDF and Excel) open with a header band: the client and the report title on the left, the Bpro logo on the right. Each statement carries the logo at the top. At the foot of every PDF and Excel output sits a **Verify this document** panel with a QR code, a **document ID** (for example `RPT-…`, `STM-…`) and a **SHA-256 fingerprint**: a 64-character code computed from what the document states, its title and the time it was issued. CSV files cannot hold a picture, so they end with the same ID, fingerprint and verification line in text. Printed pages are numbered *Page X of Y*, with the Bpro name in the opposite corner and the D&D line with its links across the foot.

How verification works. On the group's server, each download is recorded the moment it is made: its ID, fingerprint, who issued it and a short summary (for a statement, the employee, the month and the total). The QR code opens a public verification page for that record. The page says **Genuine document** and lists the details to compare with the paper in hand; **The code does not match the record** if the document has been altered since it was issued; and **No such document** if the ID was never issued. The ID is random and cannot be guessed, so only someone holding the document reaches its record, and the issuer's address is shown shortened. Outside the server (the sample build or the claude.ai copy) the QR code carries the ID and the fingerprint themselves, and online verification waits for the hosted board.

📌 **STICKY NOTE**

The payout file for payroll is the one download without a footer or QR code: it is a machine file, the header and one row per employee, so a payroll import reads it unchanged.

🔍 **LENS**

The look is warm and quiet on purpose: ivory pages, warm charcoal type, the navy and violet of the Bpro mark for structure, and terracotta and saffron for emphasis. Every text colour meets the WCAG AA contrast ratio in both the light and the dark theme.

⇆ Top bar or side bar

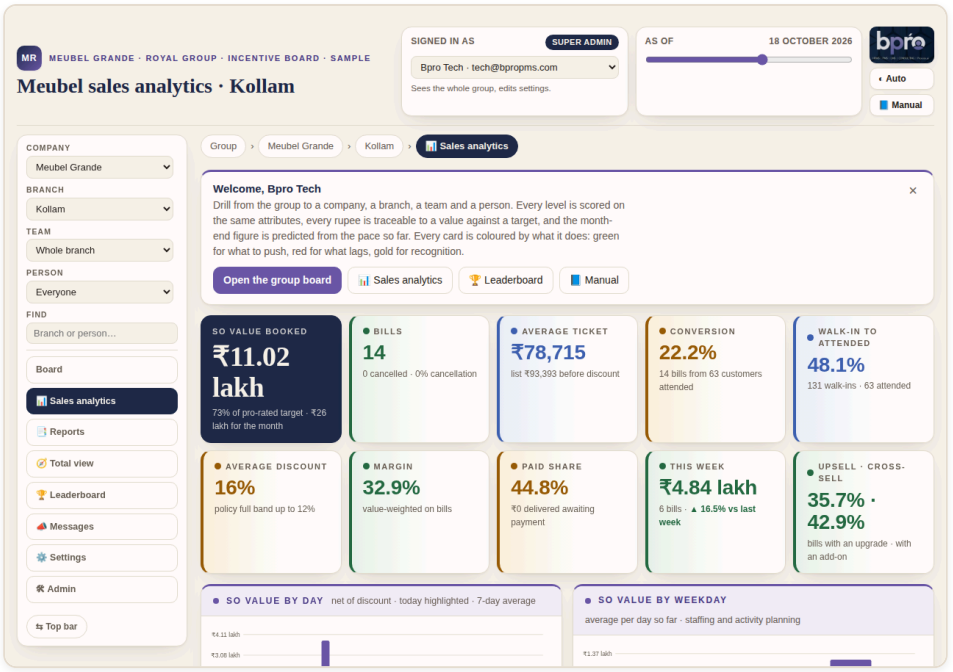

Figure 13. The same menu docked as a side bar, with the scope selectors above the view buttons

What to look at. The last button on the selector bar flips the whole menu between the top bar and a docked left side bar. The choice is remembered in the browser, and on a phone the side bar folds back to the top.

> 🔍 **LENS TIP**
>
> The movement arrows (▲ ▼) on every leaderboard compare with the rank seven days earlier on the board and with yesterday in the daily messages. A branch that is first but falling is a different conversation from a branch that is fourth but climbing.

3 🔐 Roles and sign-in

📌 **STICKY NOTE**

Scope is enforced, not suggested. A Branch Manager who types another branch's address lands back on their own branch. The selector bar only offers what the role may open.

Sign-in. In production every user signs in through the group's single sign-on (configured in 🛠 Admin → Wirings → Single sign-on); no password lives in the page. In the sample build the *Signed in as* switch at the top left stands in for the login so that every role can be rehearsed.

What production adds. Microsoft 365 sign-in accepts only the company's own tenant, and Google sign-in only verified Workspace addresses; the server can further be limited to the company's email domains. **Sign out** (next to your email under the role badge) ends your sessions on every device, so a shared or lost phone is closed from any screen. Repeated sign-in attempts are slowed down, and a change sent from any other website is refused. Branch Managers, Sales Managers and employees receive only their own branch's roster and figures; the group, every company and every branch reach only the roles that see the whole group.

ROLE	SAMPLE USERS	HOME PAGE	CAN OPEN	SETTINGS
🛡 Super Admin	tech@bpropms.com	Group	Board, 📊, 📑, 🧭 Total, 🏆, 📣, ⚙️, 🛠 Admin, Users, Reset	Edit
🔧 Admin	process@bpropms.com	Group	Board, 📊, 📑, 🧭 Total, 🏆, 📣, ⚙️, 🛠 Admin	Edit
🧭 Consultant	drbabu@bpropms.com and the Bpro consultant team	Group	Board, 📊, 📑, 🧭 Total, 🏆, 📣, ⚙️, 🛠 Admin	Read only
👑 Managing Director	md@	Group	Board, 📊, 📑, 🏆, 📣	None
👑 Director	one per company	Group	Board, 📊, 📑, 🏆, 📣	None
🫶 HR	hr@	Group	Board, 📊, 📑, 🏆, 📣 (HR audience)	None
🏬 Branch Manager	one per branch	Own branch	Own branch, its teams and people; 📊, 📑, 🏆, 📣 for the branch	None
👥 Sales Manager	one per branch	Own Sales team	Own Sales team and its people; 📊, 📑 (sales reports), 🏆, 📣 for the team	None
🧑 Employee	every staff member	Own page	Own page and own message only	None

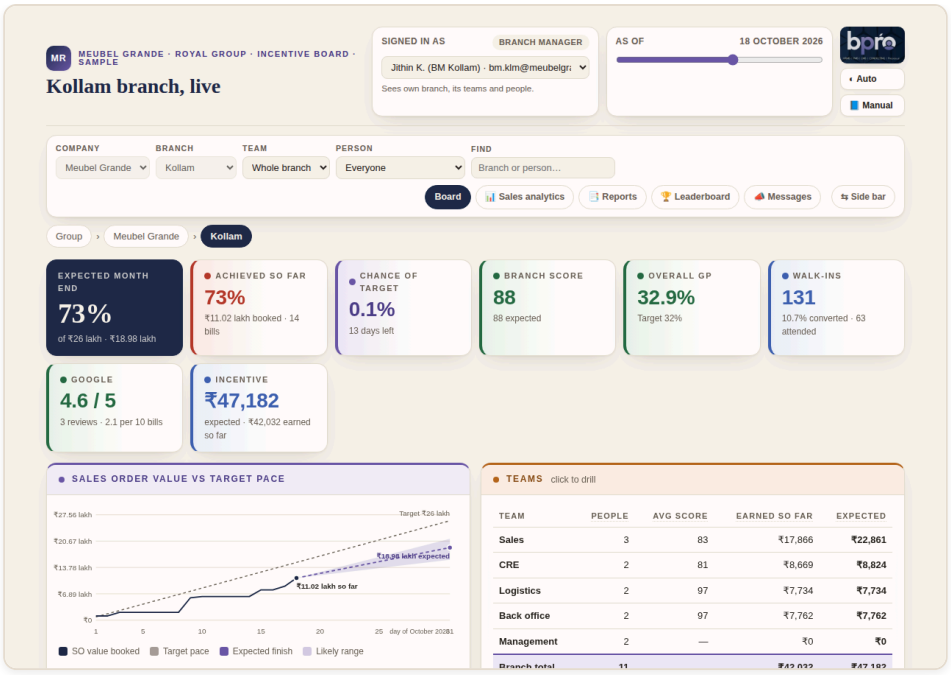

Figure 14. A Branch Manager's view: the selector bar offers only the branch, its teams and its people

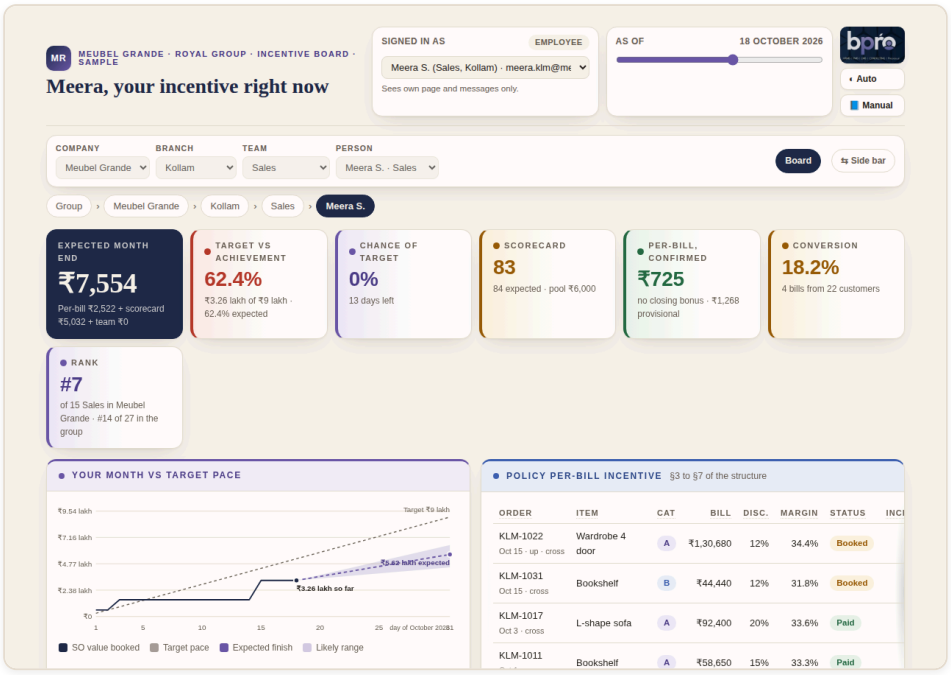

Figure 15. An employee's view: own scorecard, pushes, lags and WhatsApp summary, nothing else

▶ Procedure: add or remove a user (Super Admin only)

1. Sign in as Super Admin and open ⚙️ Settings → **Users**.
2. Enter the email, display name and role. For a Branch Manager, Sales Manager or employee also pick the branch and the person on the roster the login belongs to.
3. Save. The user appears in the *Signed in as* switch at once; in production the same row is what single sign-on maps the login to.
4. To remove, use the ✖ on the row. Removal is written to the audit log with who did it and when.

▶ Procedure: check what a role sees

1. Switch *Signed in as* to the user.
2. Try the selector bar: dropdowns outside the scope are absent, view buttons the role lacks are absent.
3. Try the address bar with another branch's state: the board redirects to the role's home page.

> ⚠ **POLICY RULE**
>
> Only Super Admin can add users or reset the board. Admin edits settings and the Admin console. Consultants read everything and edit nothing. Client roles never see Settings or Admin, which keeps the rule set in one pair of hands.

4 🧮 The scorecard explained

📌 **STICKY NOTE**

Scorecard pay = role pool × score ÷ 100. Score is the weighted sum of every attribute's attainment against its target, out of 100, reaching 120 only where achievement beats target. Attendance under **85%** makes it zero.

4.1 Attributes and weights per role

Every column sums to 100 points. The weights are editable in ⚙️ Settings → Scorecard weights and are the policy draft's placeholders until leadership confirms them.

ATTRIBUTE	TARGET	SALES	CRE	LOGISTICS	BACK OFFICE	BRANCH
Target vs achievement (SO value, pro-rated to the day)	100%	25				25
Conversion (bills ÷ customers attended)	30%	10				10
Customers attended	50 a month	5				
Average discount given	≤ 12%	8				
Discount trend vs last month	≤ 0 pp					5
Margin on own sales	30%	10				
Overall GP of the branch	32%					15
Upselling (bills with an upgrade)	20%	5				
Cross-selling (bills with an add-on)	25%	5				
Attendance	95%	6	10	10	10	4
Late punches	≤ 2	3	5	5	5	
Early going	≤ 1	2	5	5	5	
Grooming (audit, out of 5)	4.5	4	5	5	5	
Customer appreciations	3 a month	4	5	5		3
Google reviews per 10 bills	2	6				5
Google review rating	4.5					8
Commitments communicated on time	90%	7	10	10		3
Activities done vs planned	100%			5	5	5
Neatness (out of 5)	4.5				5	4
Audit score	85				5	8
Walk-out ratio	≤ 70%					5
On-time delivery	92%			30		
Damage-free delivery	97%			25		
On-time collection of dues	95%				30	

ATTRIBUTE	TARGET	SALES	CRE	LOGISTICS	BACK OFFICE	BRANCH
Documentation accuracy	97%				20	
Customer calls made on time	90%				10	
Walk-ins logged and handled	60 a month		15			
Follow-ups on time	95%		25			
Logged walk-ins converted	30%		20			
Total		**100**	**100**	**100**	**100**	**100**

Attainment. For an *up* attribute, attainment = value ÷ target, capped at 100% (achievement alone may reach 120%). For a *down* attribute such as discount or late punches, attainment falls as the value passes the limit. Monthly counts marked *pro-rated* (customers attended, appreciations, walk-ins) are compared with the share of the month elapsed, so the fifth of the month is judged against a fifth of the target.

4.2 The rupee components

COMPONENT	WHO	RULE
🧮 Scorecard pay	Sales, CRE, Logistics, Back office	pool × score ÷ 100; ⚠️ zero under 85% attendance
🧾 Per-bill incentive	Sales	category rate × bill value × discount share, plus the closing-ratio bonus; ⚠️ paid only when delivered and paid, nothing on cancellation
🤝 CRE override	CRE	10% of the sales incentive on walk-ins the CRE logged, paid by the company, not from the salesperson
📞 Follow-up bonus	CRE	₹2,000 at 95% follow-ups on time, ₹1,000 at 85%
🏬 Team achievement	BM, SM, BI	pool × branch achievement (to 120%) × branch score ÷ 100; ⚠️ open only at 90% of branch target
🎁 Team pool	Every staff member of the branch	₹20,000 shared equally; ⚠️ only at 100% of target with audit ≥ 70
± Adjustments	Anyone named in the ledger	approved additions and deductions from 🛠 Admin → Adjustments flow into the expected total

4.3 Worked example: a salesperson

A sales executive with a score of 84 on a ₹6,000 pool earns ₹5,040 scorecard pay. One bill of ₹1,40,000 list price at 10% discount is category A (0.8%), in the full band (100%), so it books ₹1,120 provisional per-bill incentive. The same bill at 22% discount would still be category A but in the 40% band: ₹448, with ₹672 forfeited. At 31% discount it pays nothing and the board flags it as an *over-30% bill*. A conversion of 32% for the month adds the 10% closing-ratio bonus on every paid bill. Nothing is paid until the order is delivered and the payment received; a cancellation after advance removes the bill from the total and the CRE's override with it.

4.4 Worked example: a Branch Manager

A branch at 96% of target with a branch score of 78 opens the management pool (above 90%). The BM's team achievement = ₹15,000 × 0.96 × 0.78 = ₹11,232. The SM on the same branch earns ₹10,000 × 0.96 × 0.78 = ₹7,488. Had the branch closed at 88%, both would be zero and the board would have shown the gap in rupees per day for the rest of the month.

4.5 Worked example: the team pool

A branch of 14 staff that closes at 101% with an audit score of 74 shares ₹20,000: ₹1,429 each, shown on every member's page as *team pool: open*. At 101% with audit 68 the pool is closed and the branch lens names the audit score as the lag.

> 🔍 **LENS**
>
> On the individual page every attribute row shows *points earned / points available*. The biggest difference is the first item under *what lags*, and the push list prices what closing it is worth.

5 🔮 Predictions, further push and what lags

📌 **STICKY NOTE**

The board never says *you will earn*. It says *at this pace you would earn*, and shows the chance. The chance tightens as the month runs: on the 5th it is a guess, on the 25th it is nearly a fact.

5.1 Month-end projection

Expected SO value = SO booked so far ÷ days elapsed × 31. Every rupee figure on the board that is labelled *expected* is computed from that projection through the same scorecard rules as the booked figure. A person, branch or company is *on pace* when the projection meets the target.

5.2 Chance of target

The chance is a normal approximation. The spread of the projection is a coefficient of variation (22% in the sample) scaled by the square root of the share of the month still to run, so the band narrows every day. At branch level the spread is 80% of a person's and at company level 60%, since many people's good and bad days cancel out. Chance = probability that the projected value lands above the target.

DAY OF MONTH	SHARE OF MONTH LEFT	SPREAD MULTIPLIER	READING
5	84%	0.92	wide band, chance near 50% unless far ahead or behind
15	52%	0.72	band halves, the number starts to mean something
25	19%	0.44	narrow band, chance near 0% or 100%
31	0%	0	closed month, chance is 0% or 100%

5.3 Provisional per-bill incentive

A bill counts at a probability until it is delivered and paid, because the policy pays only then:

BILL STATE	COUNTED AT
Delivered, payment pending	95%
Booked, delivery due in the month	85%
Business not yet booked (the projected part)	50%
Cancelled	0%, removed from the total

The constants live in ⚙️ Settings → Prediction constants and are to be recalibrated from the first three real months.

The panel also shows the spread observed between the mid-month projection and the closed figure across the months archived in 🛠 Admin → Month close (section 10.7). That observed figure, not the placeholder, is what the spread constant should be set to once three real months are in the archive.

5.4 Further push

The push list is the action list, priced. The engine computes, for the scope on screen:

- **Achievement push**: the gap to target divided by the days left, as rupees of SO value per day, with the chance of making it.
- **Attribute pushes**: for every attribute below target, the points it would add and the rupees those points are worth on the pool, sorted by rupees.
- **Policy pushes**: who is within reach of the next closing-ratio tier, bills to keep under the 12% band, delivered orders awaiting payment, CRE follow-ups needed to keep the full bonus, overdue deliveries.
- **Gate pushes**: a branch under 90% (management pool), under 100% or audit under 70 (team pool), a person under 85% attendance.

5.5 What lags

What lags is the same computation read the other way: the attributes costing the most points today, each with its value, target and the rupees at stake, and the policy leakages (bills over 30%, forfeits to the 60% and 40% bands, cancellations, late deliveries, missed follow-ups). A manager reading a team page sees the lags per person; the MD reading the group page sees the lags that recur across branches.

> 🔍 **LENS**
>
> When *further push* and *what lags* name the same attribute, that is the one to act on today: it is both the cheapest point to win and the costliest point being lost.

> 🎮 **GAMIFICATION**
>
> The chance percentage is the programme's progress bar. Teams that watch it move from 40% to 70% in a week behave differently from teams that see a target once a month.

6 🏆 Leaderboard and gamification

> 📌 **STICKY NOTE**
>
> Rank is by scorecard, then expected incentive. Movement is against seven days earlier on the board and against yesterday in the daily messages. Medals go to the top three of each role, in each branch, in each company and across the group.

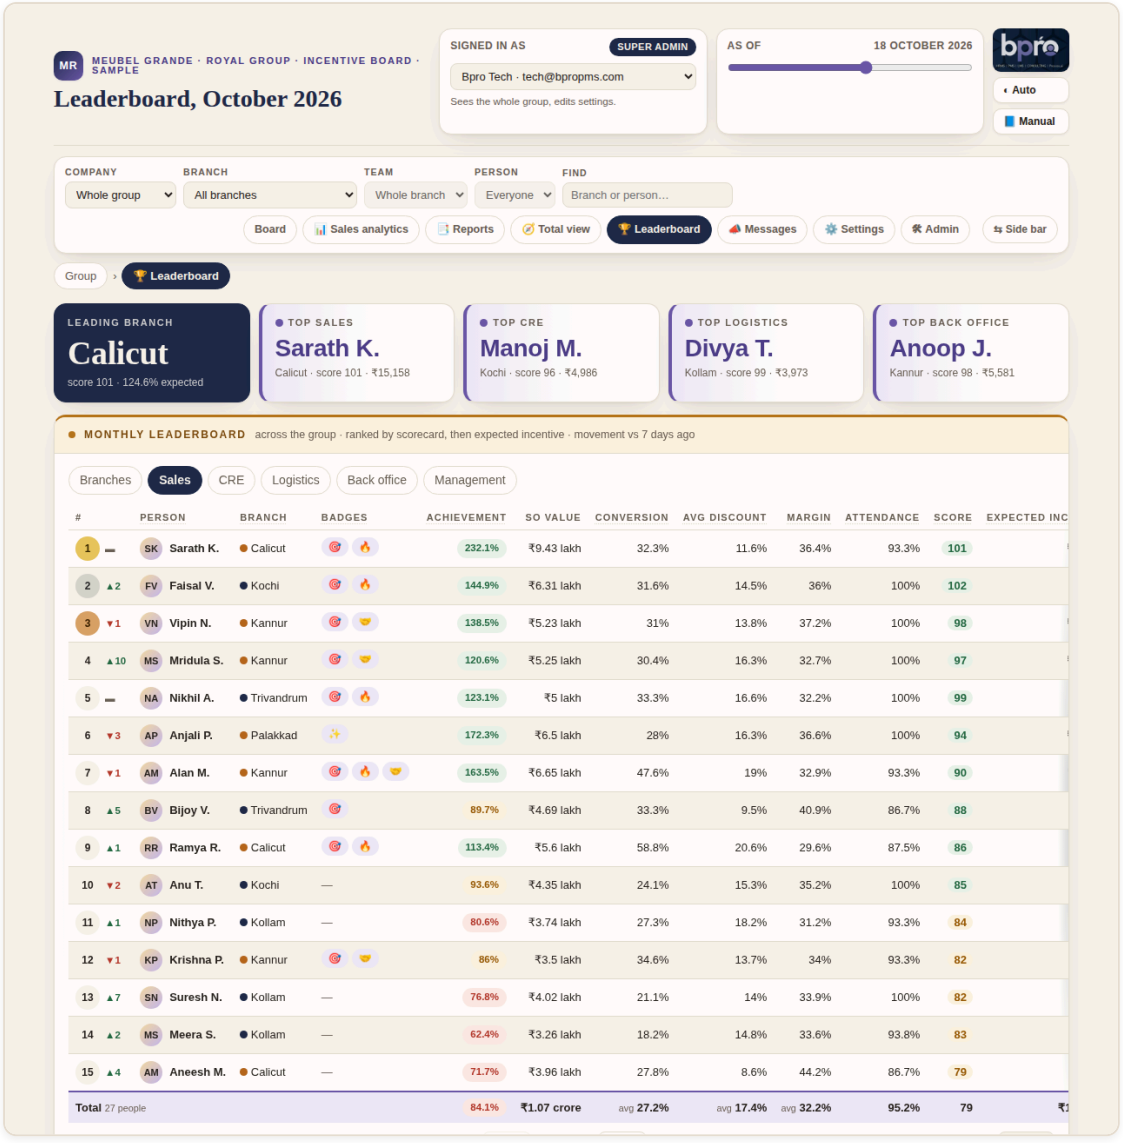

Figure 16. The leaderboard: tabs for Branches, Sales, Logistics, Back office and Management, with medals and movement

6.1 What is built in

🎮 ELEMENT	WHERE	RULE
🥇 🥈 🥉 **Medals**	every leaderboard and every team message	top three by scorecard, then expected incentive; management by expected incentive
▲ ▼ **Movement arrows**	every leaderboard	rank now against rank seven days ago (board) or yesterday (daily WhatsApp)

🎮 ELEMENT	WHERE	RULE
🏅 **Top three per role**	group lens, MD monthly email	best Sales, CRE, Logistics, Back office and Management across the group
✨ **Spotless attendance**	HR email, weekly team messages	no absence, late punch or early going in the window
🏁 **On pace**	every lens	projection meets target; the headline turns green
📈 **Chance of target**	every lens, every message	the normal-approximation probability of section 5
💰 **Priced pushes**	every lens, every message	each action shown with the rupees it is worth
🎁 **Pool status**	branch lens, BM and SM messages	open / closed against the 90% and 100% gates with the gap in rupees per day
🔔 **Closing-ratio tiers**	sales messages	who is within reach of +5% and +10%

6.2 Reading the leaderboard

1. Choose the scope with the selector bar: group, company or branch.
2. Pick the tab: Branches, Sales, Logistics, Back office or Management. CRE members rank inside their branch's team lens.
3. Read rank, movement, the role's own measures and the expected incentive. Click a name to open the individual lens.
4. The group leaderboard also lists the top three per role; the MD monthly email carries the same table.

Export and TV mode. The bar under the table exports the visible table as CSV. **TV mode** hides the header and controls, enlarges the table and rotates the tabs every 20 seconds, for a screen in the branch; sign in a display user with the Branch Manager role, open the leaderboard and press it. Esc leaves it.

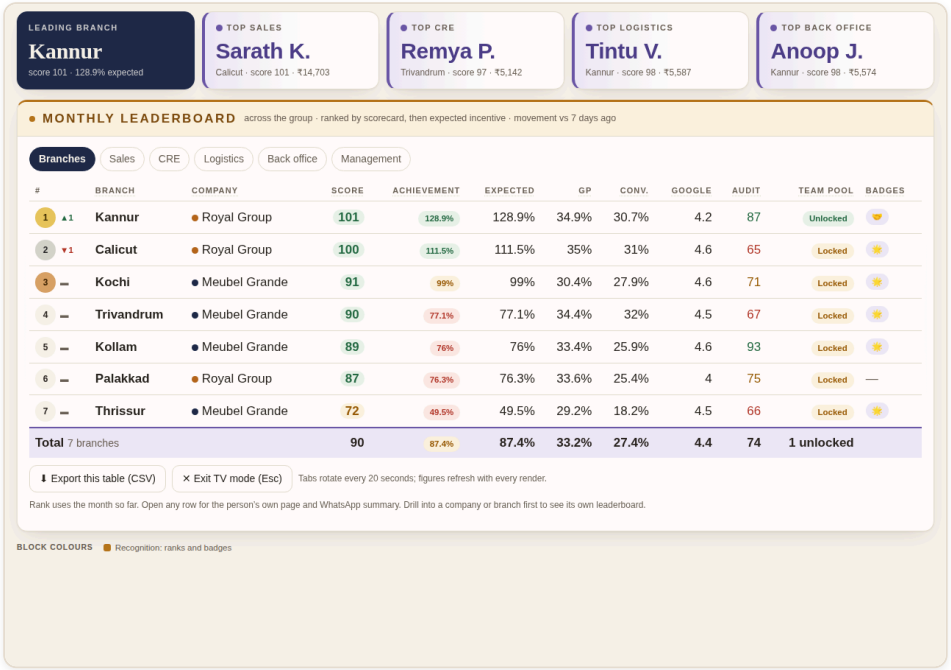

Figure 17. TV mode: the leaderboard full screen for a branch display

6.3 The badge ladder (built in, recognition only)

Ten badges are computed from the measures the engine already holds. Each person's page shows their whole ladder, earned or not, with the reason beside every badge, so the next badge is always visible. A 100% record needs at least five events before it counts. **No badge changes a payout.**

BADGE	EARNED WHEN	AUDIENCE
🥇 **Monthly champion**	first in role across the group at month close	group, MD email
🔥 **Streak**	on pace for three consecutive weeks	person, weekly message
🎯 **Sharpshooter**	conversion at or above 30% for the month	Sales, CRE
🛡 **Discount guardian**	no bill above 12% all month	Sales
📦 **Clean sheet**	100% damage-free deliveries in the month	Logistics
📞 **Never missed**	100% follow-ups on time	CRE
📑 **Zero error**	100% documentation accuracy	Back office
✨ **Spotless**	perfect attendance and punctuality	everyone, HR email
🌟 **Five stars**	branch Google rating at or above 4.5 with 2+ reviews per 10 bills	branch
🤝 **Full house**	branch earns the team pool	every member

Where badges appear. On the individual lens as the *Badge ladder* card; on every leaderboard row and in the branch table as icons (hover for the rule); in the personal WhatsApp summary as a 🥇 line; and on the group lens as the *Badge wall*, which lists this month's holders of each badge. If leadership wants a prize attached, the ledger in 🛠 Admin → Adjustments is the place to add it with an approver.

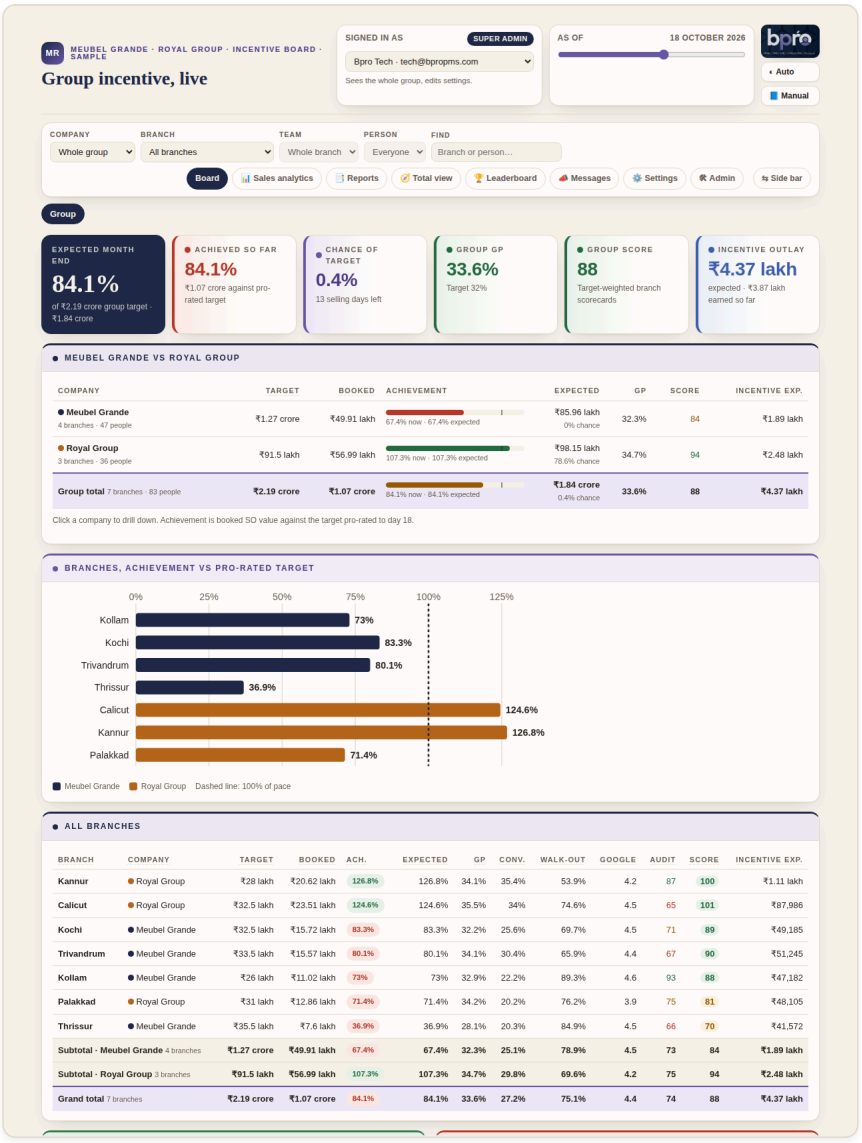

Figure 18. The badge wall on the group lens: holders of each badge so far this month

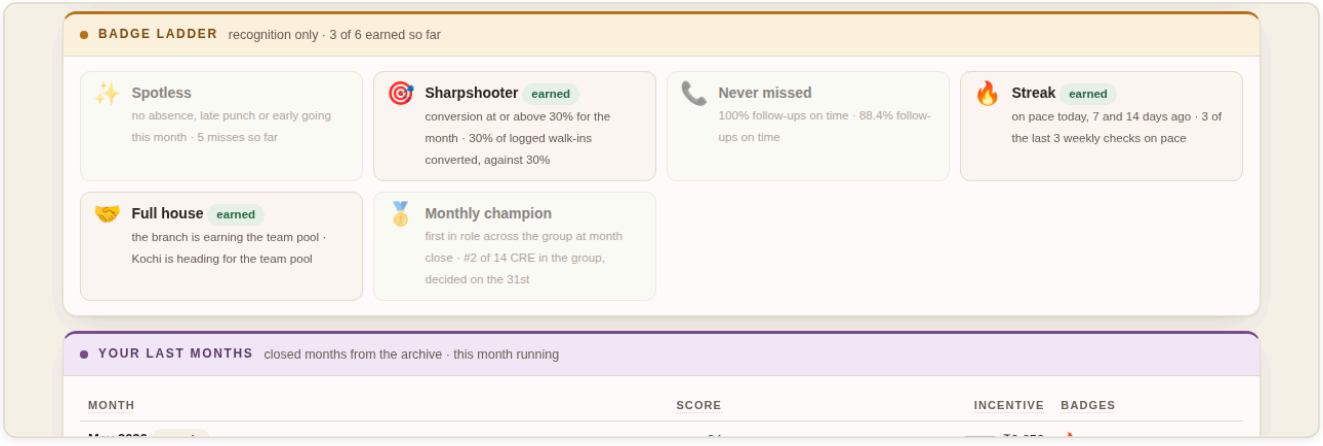

Figure 19. A CRE's badge ladder: earned badges in colour, the rest with what is still needed

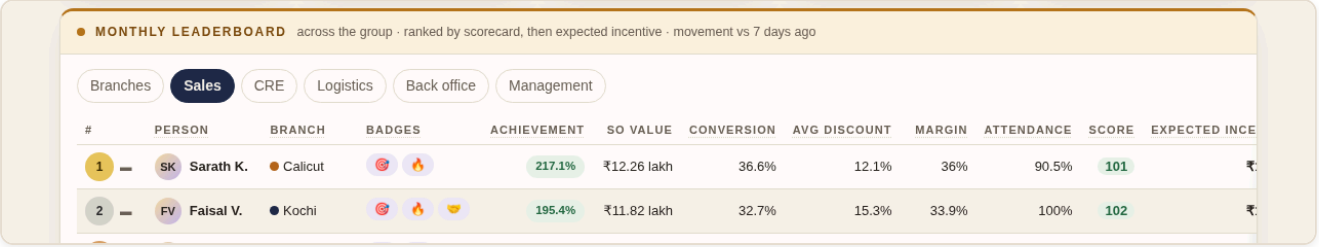

Figure 20. The Sales leaderboard with the badges column

> ⚠ **POLICY RULE**
>
> Gamification never changes a payout. Medals, arrows and badges are recognition; the rupees come only from the scorecard, the per-bill rules, the pools and approved adjustments.

7 📣 Messages centre

📌 **STICKY NOTE**

Every audience × cadence × channel exists. The starred cells are hand-tailored templates; the rest come from one digest engine. All of them read the same figures as the board, so nobody receives a number the board does not show.

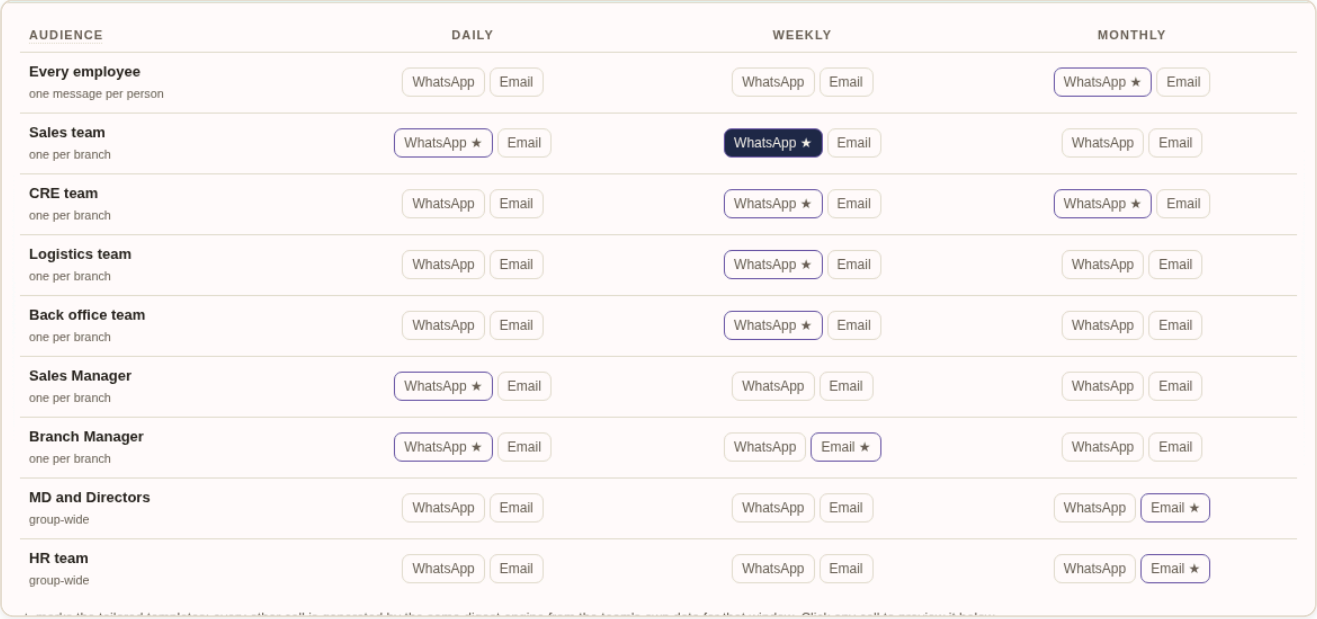

Figure 21. The messages matrix: audience down the side, daily / weekly / monthly across, WhatsApp or email

7.1 The matrix

AUDIENCE	DAILY	WEEKLY	MONTHLY
🧑 Every employee	digest	digest	★ personal summary
🛍 Sales team	★ via the SM message	★ weekly team message	digest
📞 CRE team	digest	★ weekly CRE message	★ monthly CRE message
🚚 Logistics team	digest	★ weekly team message	digest
🗂 Back office team	digest	★ weekly team message	digest
👥 Sales Manager	★ daily team message	digest	digest
🏬 Branch Manager	★ daily branch message	★ weekly branch review (email)	branch review
👑 MD and Directors	group review	group review	★ monthly group review (email)
🫶 HR team	HR review	HR review	★ monthly HR and payroll review (email)

Each cell is available as WhatsApp text (bold and italic in WhatsApp markup) and as an inline-styled HTML email that renders in Gmail and Outlook.

7.2 The send calendar

WHEN	MESSAGE	CHANNEL	RECIPIENTS
Every evening 21:00	Daily SM message, daily BM message	WhatsApp	each SM, each BM
Monday 08:00	Weekly branch review	Email	each BM with the SM in copy; group version to leadership
Saturday 19:00	Weekly Sales, CRE, Logistics and Back office messages	WhatsApp	each team group
16th	MD mid-month preview	Email	MD and Directors
1st 08:00, after reconciliation	Personal summaries, monthly CRE message, MD monthly review, HR and payroll review	WhatsApp and email	every employee, CRE groups, MD, Directors, HR

7.3 What each tailored message carries

- **Personal summary**: expected incentive, target position and chance, scorecard and rank, what is going well, what lags with the rupees at stake, the pushes, the provisional-until-delivered note.
- **Daily SM**: today's bookings and walk-ins against yesterday, month position, the sales leaderboard with medals and movement since yesterday, the day's attention points, tomorrow's pushes priced per person, the SM's pool status.
- **Daily BM**: today's bookings, bills and collections, month position and GP, rank among the company's branches, one line per team, attention points, tomorrow's load, the BM's pool position.
- **Weekly Sales**: bookings and bills against last week, conversion, discount, margin, upsell and cross-sell, per-bill incentive booked and forfeited, leaderboard, leakages, next week's pushes.
- **Weekly CRE**: walk-ins logged, follow-ups due and on time, conversions with override earned, leaderboard with follow-up bonus status, misses, whether the full bonus is still reachable.
- **Weekly Logistics**: deliveries, on-time, damage-free and promises-communicated rates, leaderboard, misses by person, deliveries due next week, the reminder that a late or damaged delivery can cancel the sale.
- **Weekly Back office**: dues and on-time collection, documents and error-free rate, calls on time, audit and neatness, leaderboard, misses, from the 24th the month-end reconciliation duty.
- **Weekly BM email**: SO booked this week against last, month-to-date and projection, branch score and rank with movement, the company branch leaderboard, the branch's team leaderboards, attributes that improved or slipped, up to four actions, the BM's payout position.
- **Monthly MD email**: group achievement, GP, score and outlay as a share of SO value, Meubel Grande against Royal Group, the group branch leaderboard, top three per role, every BM's pool status, outlay by role, policy health, a watch list, a numbered approval list.
- **Monthly HR email**: attendance and punctuality by branch, people to act on, punctuality leaderboard, regularisations and disputes from the ledger, payroll input by role, the handover action list.

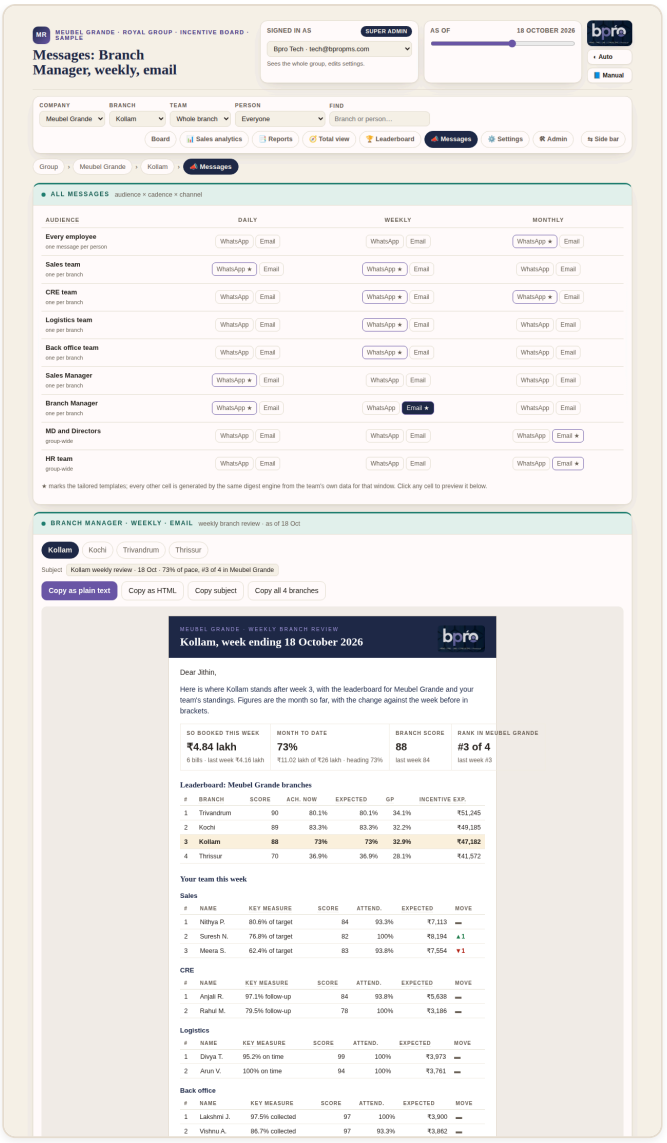

Figure 22. A weekly BM email previewed as the HTML itself

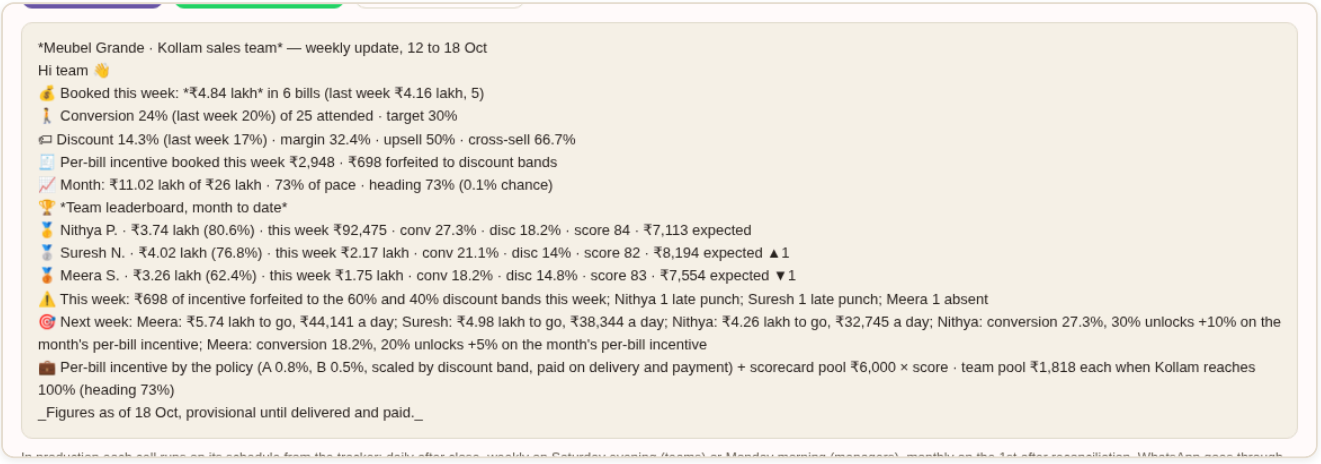

Figure 23. A weekly team WhatsApp message in the messages centre

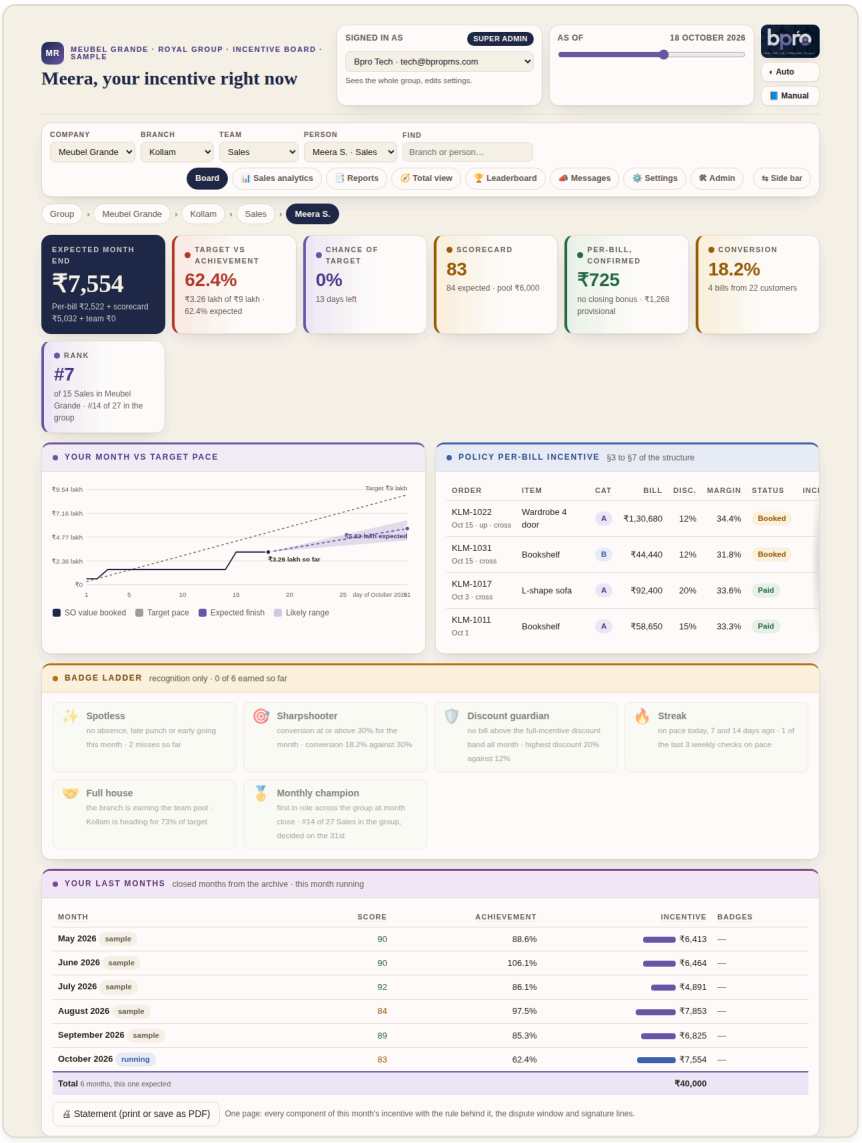

Figure 24. An employee's WhatsApp summary at the foot of the individual lens

7.4 Procedure: generate and send a message by hand

1. Open 📣 Messages. Pick the audience, cadence and channel in the matrix.
2. Pick the branch (or the person for the personal summary) from the tabs above the preview.
3. Read the preview. WhatsApp shows the exact text; email shows the rendered HTML.
4. **Copy message** copies the text (or the rich HTML for email; **Copy subject** and **Copy as text** sit beside it). **Open in WhatsApp** opens a wa.me draft.
5. **Copy all branches** (or **Copy all people** on a team lens) copies every message of that cell at once, separated by a line, for pasting into the groups.

7.5 Procedure: schedule the sends

1. In 🛠 Admin → Wirings set *WhatsApp Business API* and *Email* to **sandbox**, enter the endpoint and the name of the secret held in the server vault, and press **Test**.
2. In 🛠 Admin → Jobs and status check that each send job shows the schedule above and press **Run now** on one to confirm delivery to a test number.

3. Switch the channel to **live**. The jobs then run on schedule; every run is written to the audit log.

On the server, nothing goes out until the operator sets `DRY_RUN=0` on purpose; until then every message is written to the messages log only. Each message goes to each person once per run, so a re-run or a restart never sends twice, and a send that fails is retried on the next run. The monthly round on the 1st reports the month that has just ended, scored to its last day, not the new month.

> 🔍 **LENS**
>
> The daily SM and BM messages are the programme's heartbeat. If the branch does not read them in the evening, the weekly and monthly messages arrive too late to change the month.

8 ⚙️ Settings manual for administrators

📌 STICKY NOTE

Settings change the rules for everyone the moment they are saved, and every number on the board re-computes. Change values in a draft policy version, get it approved and communicated, then make it live (section 10.1). Never edit a live month to fix one person; that is what the adjustments ledger is for.

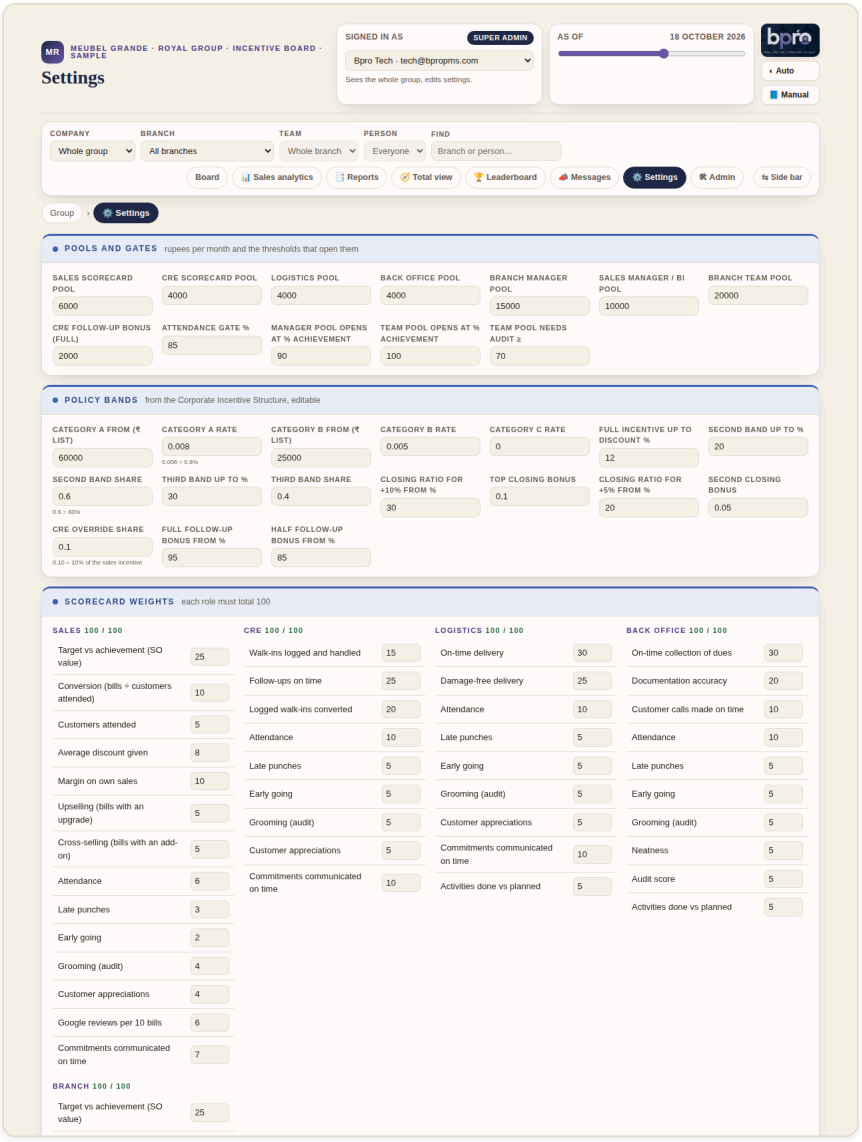

Figure 25. Settings: pools and gates, policy bands, weights, targets, prediction constants and data inputs on one page

8.1 Who may edit

Super Admin and Admin edit. Consultants see every value read-only. Client roles do not see the page.

8.2 The panels

PANEL	FIELDS	NOTES
💰 Pools and gates	Sales, CRE, Logistics, Back office pools; BM, SM and BI pools; team pool; CRE follow-up bonus; attendance gate (85); management gate (90); team-pool achievement (100) and audit (70)	monthly rupees and percentages
🧾 Policy bands	category thresholds and rates (A ₹60,000 at 0.8%, B ₹25,000 at 0.5%, C 0%); discount bands and shares (12 / 20 / 30% at 100 / 60 / 40%); closing-ratio tiers (30% +10%, 20% +5%); CRE override 10%; follow-up thresholds (95% full, 85% half)	a bill above the last band pays nothing
⚖️ Scorecard weights	one column per role, every attribute weight	the live total must read 100 / 100 in green or the panel refuses to save
🎯 Attribute targets and limits	the target for every attribute in section 4.1	*down* attributes take a ceiling
🔮 Prediction constants	delivered-pending 0.95, booked 0.85, projected 0.50, spread 0.22	recalibrate after three real months
📥 Data inputs	one row per source: sample, upload or link	section 9
👥 Users	add and remove logins	Super Admin only, section 3

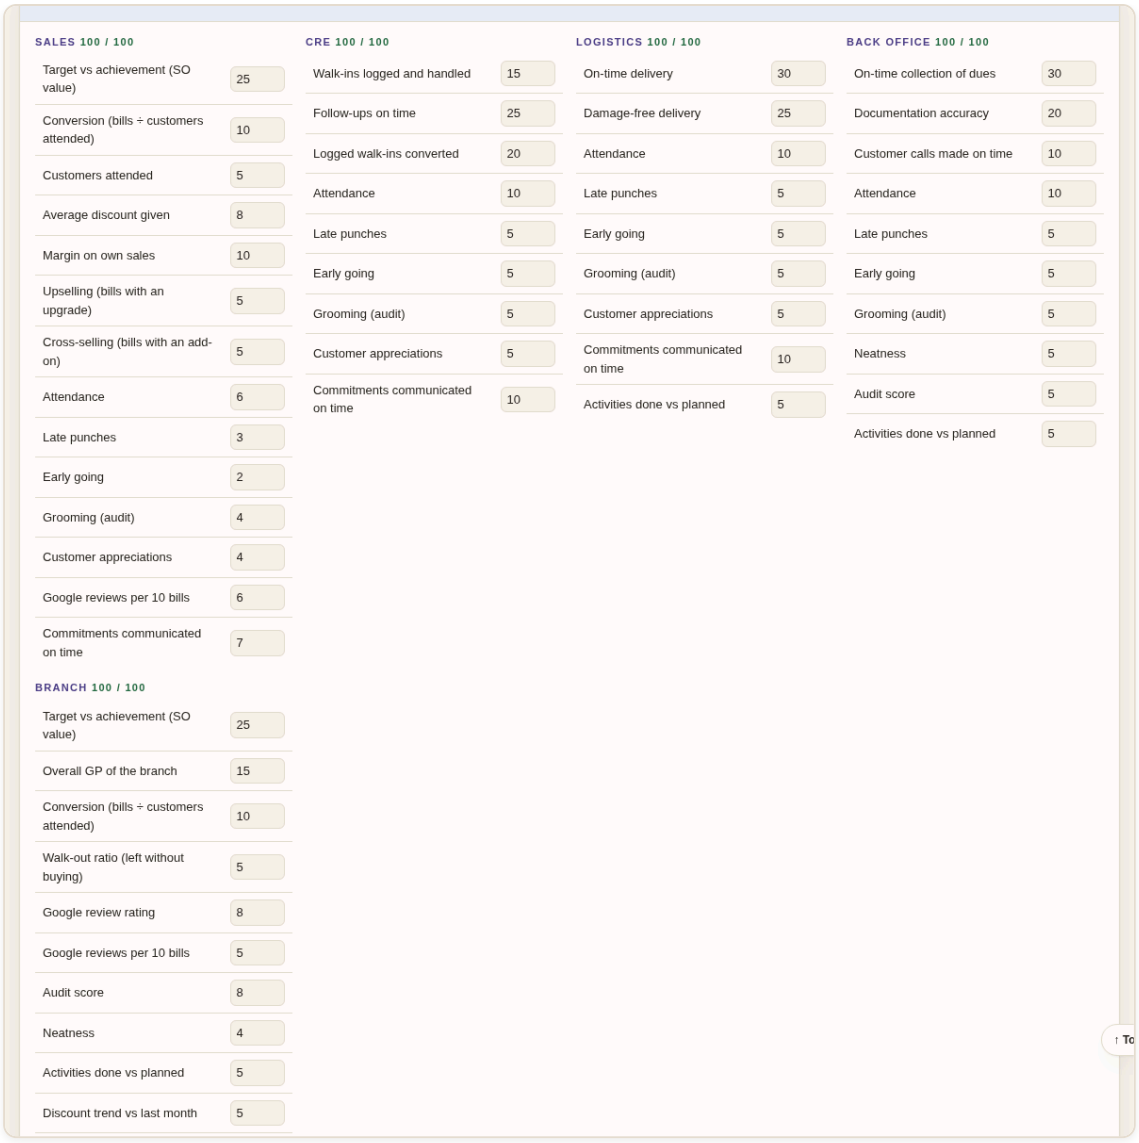

Figure 26. Scorecard weights: every role's column with its live total

8.3 Procedure: change a pool, gate, band or target

1. Sign in as Admin or Super Admin and open ⚙️ Settings.
2. Edit the field. The board re-computes at once; open any lens to see the effect before saving.
3. Press **Save** to keep the values in the browser (in production, in the settings table with the audit trail).
4. Press **Copy JSON** and paste the text into the change request or the policy version's note, so the approver sees exactly what changed.
5. Go to 🛠 Admin → Policy versions and press **Save current settings as a new version** (section 10.1).

8.4 Procedure: change scorecard weights

1. In **Scorecard weights** pick the role's column.
2. Move points between attributes; the total at the top of the column turns red while it is not 100.
3. When every column reads 100 / 100, save.

4. Open a person of that role and confirm the scorecard still reads sensibly: a weight of zero removes the attribute from their page.

8.5 Procedure: export, import and reset

- **Copy JSON** copies the whole configuration (pools, gates, bands, policy, prediction constants, weights, targets).
- **Paste** or **Upload** restores a configuration from that JSON. Use it to move a tested configuration from the sandbox to the live server.
- **Reset to policy defaults** returns every value to the 19 September 2026 draft. Super Admin only; the reset is written to the audit log.

8.6 Two administrators at the same time

Every shared setting, the adjustments ledger, the users list, policy versions, wirings, the month close and the archive carry a version. When you save, the board names the version your screen started from. If someone else saved in between, nothing is overwritten: the board merges the two (what you changed and what they changed are both kept; if you both changed the same item, your change wins), saves the result and reloads with a short notice naming who else saved. When another person saves while your screen is open, a notice appears within a minute with a **Reload now** button, so you do not keep working on an old copy.

8.7 Procedure: rehearse a month

1. Set *as of* to 1 and read the group lens: chance near 50% everywhere, wide bands.
2. Step to 10, 20 and 31 and watch the bands narrow and the pools open or close.
3. At 31 open 📣 Messages → MD monthly email: it reads as the closed month for approval.

> ⚠️ **POLICY RULE**
>
> The payment rule (paid only on delivery and payment, nothing on cancellation) and the attendance gate's effect (scorecard pay to zero) are in the engine, not in Settings. Changing them is a policy change that needs a new build and a new policy version.

9 Data inputs: CSV, link and API

STICKY NOTE

Every source has three modes: **sample**, **upload** and **link**. Uploaded rows replace the sample only for the people or branches they name, so a branch can go live one source at a time. The first two columns of every file are mandatory; the rest may be blank.

Figure 27. Data inputs: one row per source with mode, template, upload, link and status

9.1 Matching people and branches

Rows name people by the roster name or id and branches by name. Press **Copy roster** on the panel to get `id,name,role,branch,company` for every person and paste it into the source system's export mapping. A row that names nobody on the roster is ignored and counted in the status line, so check the count after every upload.

When the board is hosted, its branches and people are built from the roster loaded by the administrator, not from the sample: every person starts empty and the sources below fill them.

9.2 The sources

SOURCE	COLUMNS	EXAMPLE ROW	FEEDS
Sales targets	employee, target	Anjali R., 850000	achievement, branch target
Orders / bills	employee, order_no, day, item, list_price, discount_pct, status, deliver_day, pay_day, cancel_day, margin_pct, upsell, cross, review, commitment_ok, cre, offer, reason	Anjali R., KLM-1041, 2, Verona L-shape sofa, 140000, 10, paid, 9, 11, , 32, 1, 0, 1, 1, Meera S., 0,	SO value, per-bill incentive, conversion, discount, margin, upsell, cross-sell, reviews, commitments, CRE override
Customers attended	employee, day, count	Anjali R., 2, 4	conversion, customers attended
Attendance punches	employee, day, status (p present, l late, e early going, a absent, o weekly off)	Anjali R., 3, l	attendance, late, early, gate
Walk-ins	branch, day, count, cre	Kollam, 2, 9, Meera S.	walk-out ratio, walk-ins logged
CRM follow-ups	cre, day, on_time, communicated	Meera S., 4, 1, 1	follow-ups on time, follow-up bonus, commitments
Delivery log	employee, day, on_time, damage_free, communicated	Suresh N., 5, 1, 1, 1	on-time, damage-free, commitments
Collection register	employee, day, on_time	Arun V., 6, 1	on-time collection
Documentation log	employee, day, ok	Arun V., 6, 1	documentation accuracy
Customer call log	employee, day, on_time	Arun V., 6, 0	calls on time
Branch audit, neatness, Google, last-month discount	branch, audit_score, neatness, google_rating, last_month_discount	Kollam, 88, 4.4, 4.6, 14.5	audit, neatness, rating, discount trend
Activities planned / done	branch, employee, day, name, done	Kollam, , 12, Society activation, 1	activities done vs planned
Customer appreciations	employee, day	Anjali R., 9	appreciations
Grooming and neatness audit	employee, grooming, neatness	Anjali R., 4.5,	grooming, neatness

`status` on an order is one of booked, delivered, paid or cancelled; `offer` 1 marks an offer-price bill, which the policy puts in category C; `cre` names the CRE who logged the walk-in so the override can be paid. Days are the day of the month (1 to 31).

9.3 Procedure: upload a CSV

1. Open ⚙️ Settings → Data inputs and find the source's row.
2. Press **Copy template**: the column header and an example row land on the clipboard. Fill it from the source system (CSV or JSON, UTF-8).

3. Choose the file in **Upload**. The status line reads, for instance, *42 punches applied*, and the mode turns to **upload**.
4. Open a person named in the file and confirm the attribute changed.
5. Any later upload of the same source replaces the earlier rows for the people it names.

9.4 Procedure: connect a link or API

1. Set the mode to **link** and paste the URL that returns the same columns (CSV or a JSON array of objects).
2. Press **Fetch now**. On the hosted board the fetch runs and the status line shows the row count; in the artifact sandbox outside calls are blocked, so fetch only works once the page is on the group's server.
3. For a scheduled feed, add the system in 🛠 Admin → Wirings with its auth and schedule (section 10.3). The schedule is every 15 minutes for orders and walk-ins, hourly for attendance and deliveries, nightly for the rest.

Scheduled CSV exports on the server. Files dropped into the server's inbox as `<source>.csv` load into the current month every 15 minutes and are then moved aside, so a file is never imported twice or into the next month. Name a file `<source>-YYYY-MM.csv` to load a particular month, for example a late correction to last month. An empty or half-written file is refused and the month keeps its rows.

9.5 Procedure: return a source to sample

Set the mode back to **sample**. The generated data returns for that source only; the audit log records the switch.

> 🔍 **LENS**
>
> The 🧭 Total view and 🛠 Admin → Jobs both show *sources on sample*. The programme is live when that count is zero.

10 🛠️ Admin console

📌 **STICKY NOTE**

The console is the back-end entry and status window. Six tabs: Policy versions, Adjustments, Wirings, Jobs and status, Month close, Audit log. Super Admin and Admin edit; the consultant team reads. Everything done here is written to the audit log with who and when.

10.1 Policy versions

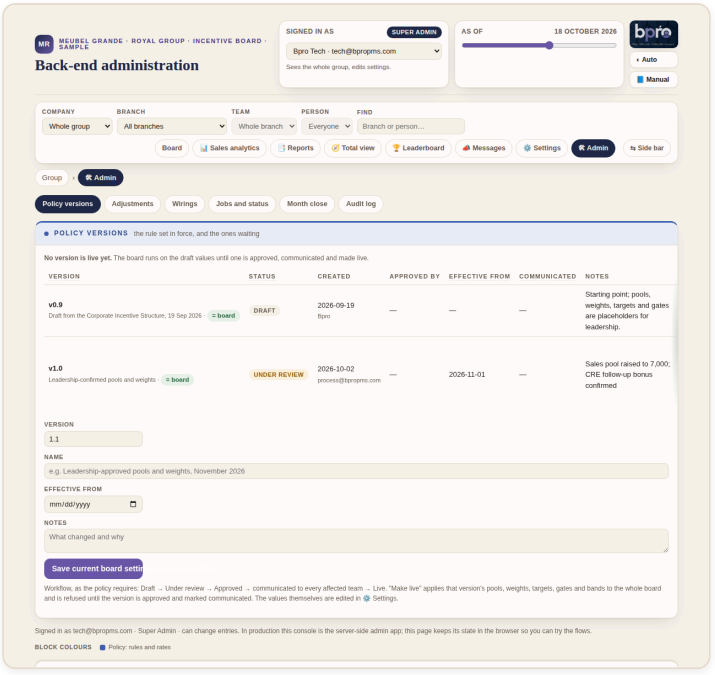

Figure 28. Policy versions: the live rule set and the ones waiting, with their workflow state

A policy version is a snapshot of every Settings value with a name, a note and a state. The workflow is **Draft → Under review → Approved → Communicated → Live**. *Make live* applies the version to the whole board and is refused until the version is approved and marked communicated, because the policy says no rule takes effect before it is communicated to the teams.

▶ Procedure: publish a rule change

1. Make the change in ⚙️ Settings (section 8).
2. In Policy versions press **Save current settings as a new version**; give it a name such as *November 2026 pools* and a note saying what changed and why.
3. Move it to **Under review** and share the JSON with the approver.
4. On approval move it to **Approved**; after the teams have been told, tick **Communicated** (the date is recorded).
5. Press **Make live**. The previous live version becomes history and can be reloaded to inspect it.
6. If a change must be undone, load the previous version and make it live again by the same route.

10.2 Adjustments ledger

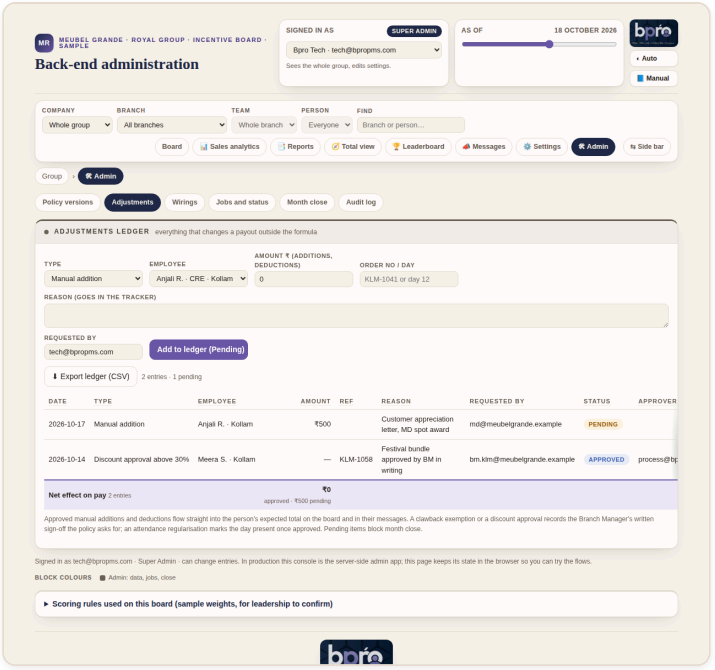

Figure 29. Adjustments: manual additions and deductions, exemptions, approvals, disputes and regularisations

Each entry has a type, the employee, an amount where relevant, a reference, a reason, the requester, the approver and a status (Pending, Approved, Rejected).

TYPE	EFFECT WHEN APPROVED
Addition	added to the person's expected total on the board and in their messages
Deduction	subtracted likewise
Clawback exemption	a cancellation after advance keeps its per-bill incentive
Discount approval above 30%	the bill is marked approved; the forfeit stands unless an addition is also approved
Dispute	logged against the statement; resolved inside the 7-day window
Attendance regularisation	the day is marked present for the gate and the attendance score

▶ Procedure: raise and approve an adjustment

1. Press **New entry**, choose the type, the person and the amount, paste the reference (ticket, email or bill number) and the reason.
2. The entry is Pending. Pending items block the *Adjustments* step of month close.
3. The approver (a different user from the requester) opens the row and presses **Approve** or **Reject**. The board re-computes at once.
4. Approved entries appear on the person's page as *adjustments* and in the HR monthly email.

10.3 Wirings

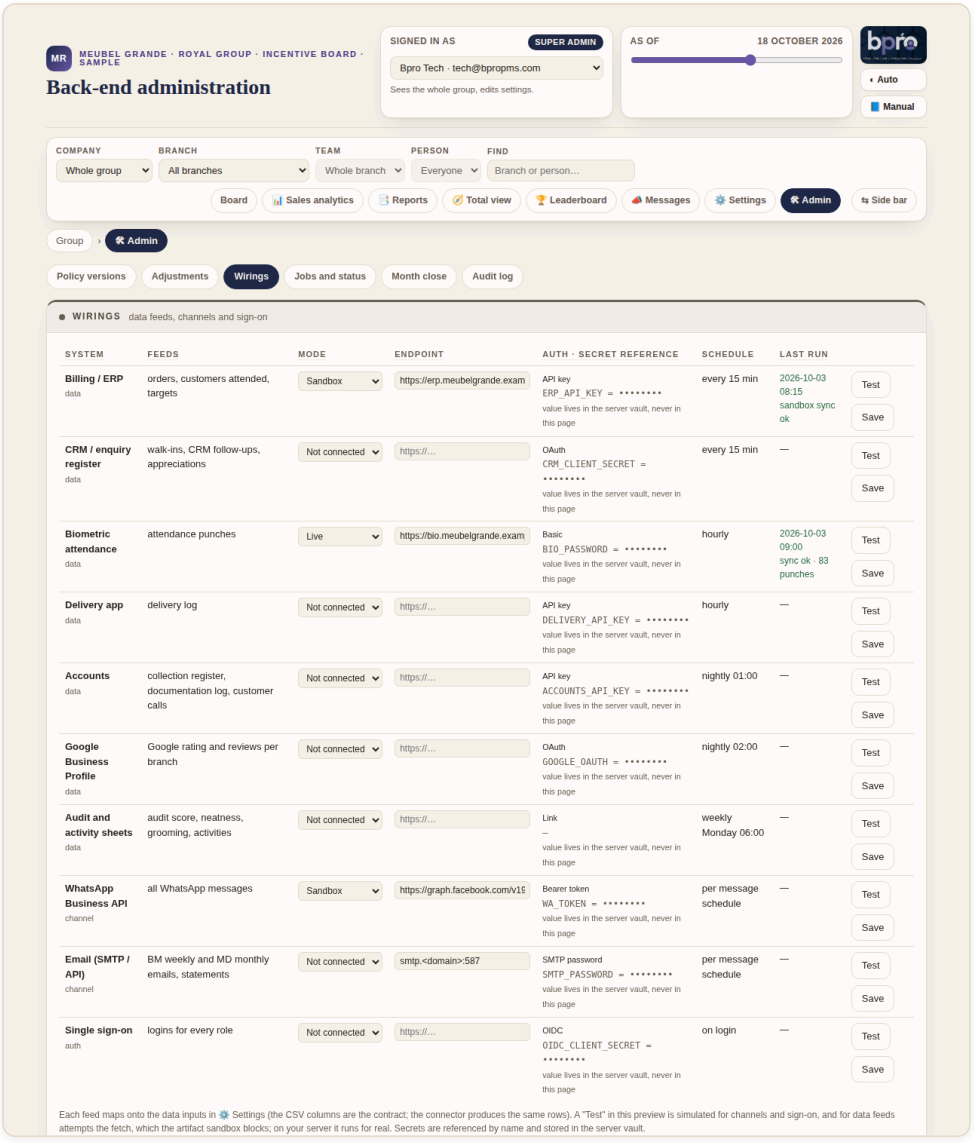

Figure 30. Wirings: every integration with mode, endpoint, auth, secret name, schedule and last run

WIRING	KIND	FEEDS	AUTH	SCHEDULE
Billing / ERP	data	orders, customers attended, targets	API key	every 15 minutes
CRM / enquiry register	data	walk-ins, follow-ups, appreciations	OAuth	every 15 minutes
Biometric attendance	data	attendance punches	Basic	hourly
Delivery app	data	delivery log	API key	hourly
Accounts	data	collection register, documentation, customer calls	API key	nightly
Google Business Profile	data	rating and reviews per branch	OAuth	nightly
Audit and activity sheets	data	audit score, neatness, grooming, activities	link	nightly

WIRING	KIND	FEEDS	AUTH	SCHEDULE
WhatsApp Business API	channel	every WhatsApp message	bearer token	per job
Email (SMTP / API)	channel	BM weekly, MD monthly, HR monthly, statements	SMTP password	per job
Single sign-on	auth	logins for every role	OIDC	on login

Each wiring has a mode (**not connected**, **sandbox**, **live**), an endpoint, the auth type and the **name of the secret** held in the server vault. ⚠️ The secret itself is never typed into the board.

> ▶ **Procedure: connect a system.**

Set the mode to sandbox, enter the endpoint and the secret name, press **Test** (the result and time are recorded), press **Save**, watch two scheduled runs in Jobs and status, then switch to live.

10.4 Jobs and status

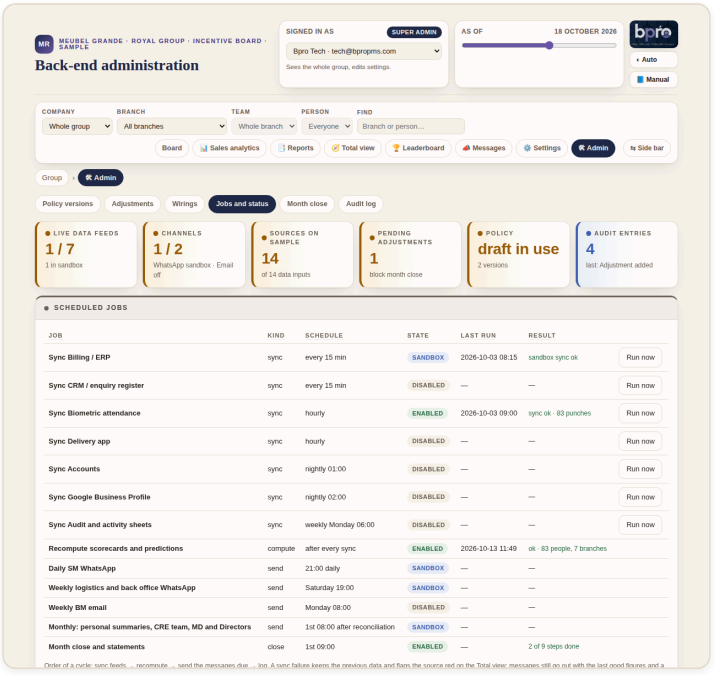

Figure 31. Jobs and status: live feeds, channels, sources on sample, pending adjustments, policy state, and the scheduled jobs

The tiles at the top are the programme's health check: live feeds out of seven, channels on, sources still on sample, pending adjustments, the live policy version and the audit count. Below, every scheduled job (each sync, the recompute, each message run, month close) with its state, last run and result, and **Run now** on the syncs.

10.5 Month close

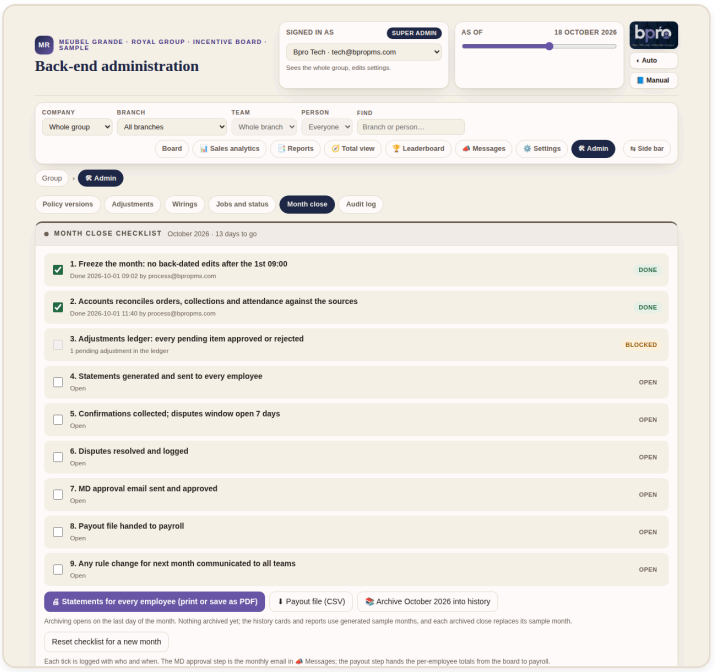

Figure 32. Month close: the nine-step checklist, each tick logged

1. Freeze the month: no back-dated edits after the 1st 09:00.
2. Accounts reconciles orders, collections and attendance against the sources.
3. Adjustments ledger: every pending item approved or rejected (blocked while any is pending).
4. Statements generated and sent to every employee.
5. Confirmations collected; disputes window open 7 days.
6. Disputes resolved and logged.
7. MD approval email sent and approved.
8. Payout file handed to payroll.
9. Any rule change for next month communicated to all teams.

Each tick records who and when. The HR monthly email and the MD monthly email are generated between steps 2 and 7.

10.7 Archive, statements and payout file

The bar under the checklist carries the three outputs of a close:

1. **Statements for every employee** fills a print view with one A4 page per person (every component with the rule behind it, the 7-day dispute window, signature lines, the Bpro logo, its own QR code, document ID and fingerprint, and the D&D line with its links at the foot) and opens the browser's print dialog. Choose *Save as PDF* for the files that go out, or print. **Statement** on any person's page prints that one person's. Inside the claude.ai viewer, where the frame may not open a print dialog, the board also offers a print-ready copy to save; open it and it prints itself.

2. **Payout file (CSV)** downloads one row per employee with employee id, role, branch, attendance, gate, score, scorecard pay, per-bill confirmed and provisional, CRE override, follow-up bonus, team pool share, adjustments, total confirmed, total expected, group rank and badges. This is the hand-over to payroll in step 8. It is a plain machine file (the header and one row per employee, no footer lines), so a payroll import reads it as it is.

3. **Archive into history** opens on the last day of the month. It snapshots every branch and every person, including each branch's mid-month projection, so that ⚙️ Settings → Prediction constants can show the spread observed between projection and outcome. After three real closes, set the spread constant from that figure.

The **Export ledger (CSV)** button on the Adjustments tab gives the auditor the same ledger as a file.

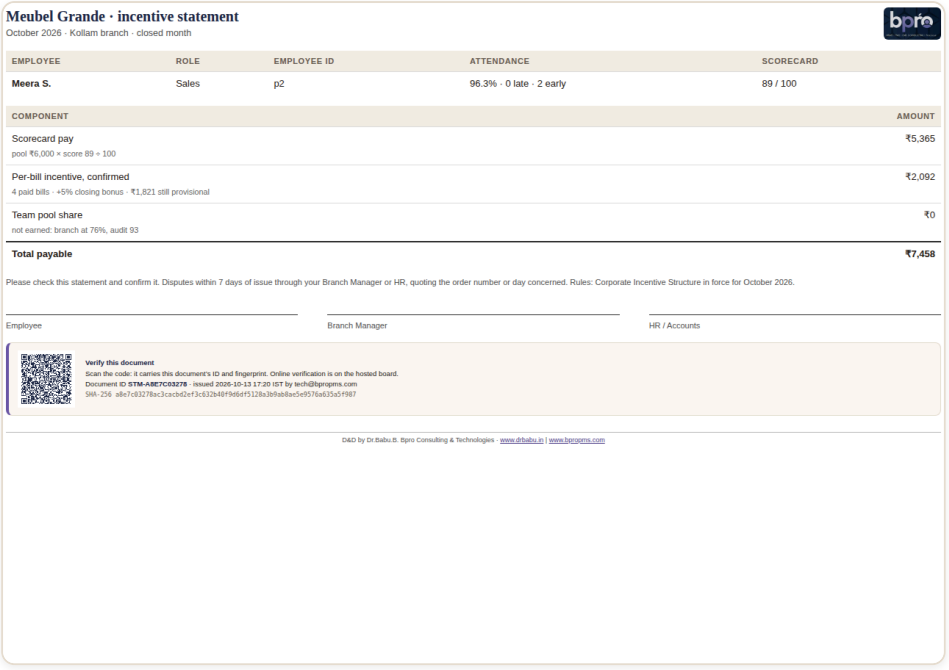

Figure 33. A printed statement: components with their rules, the dispute note and signature lines

History cards. The group lens, every branch lens and every person's page carry a history card with the last five months and the running month marked, and a total across them. Until real closes exist the sample build shows generated months, flagged *sample*; each archived close replaces its sample month, and a board on the live roster shows only real months. For longer spans use 📑 Reports.

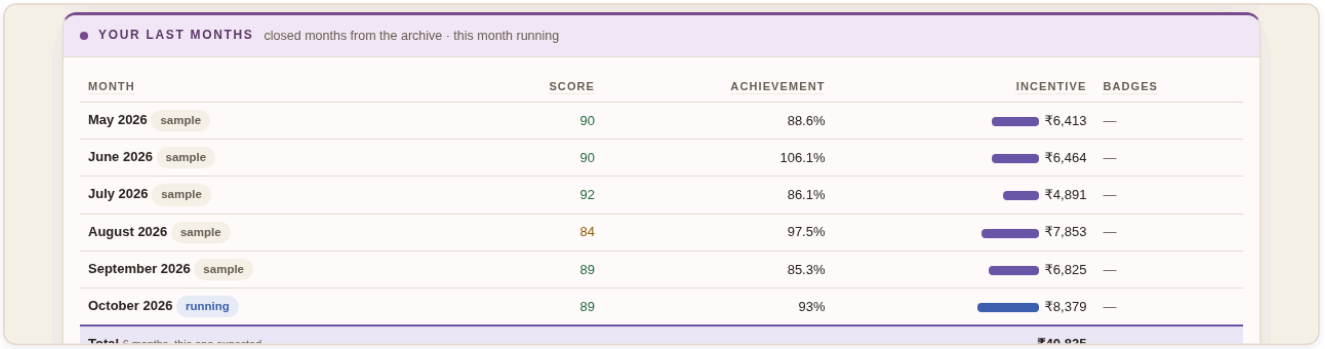

Figure 34. A person's history card: score, achievement, incentive and badges by month

10.6 Audit log

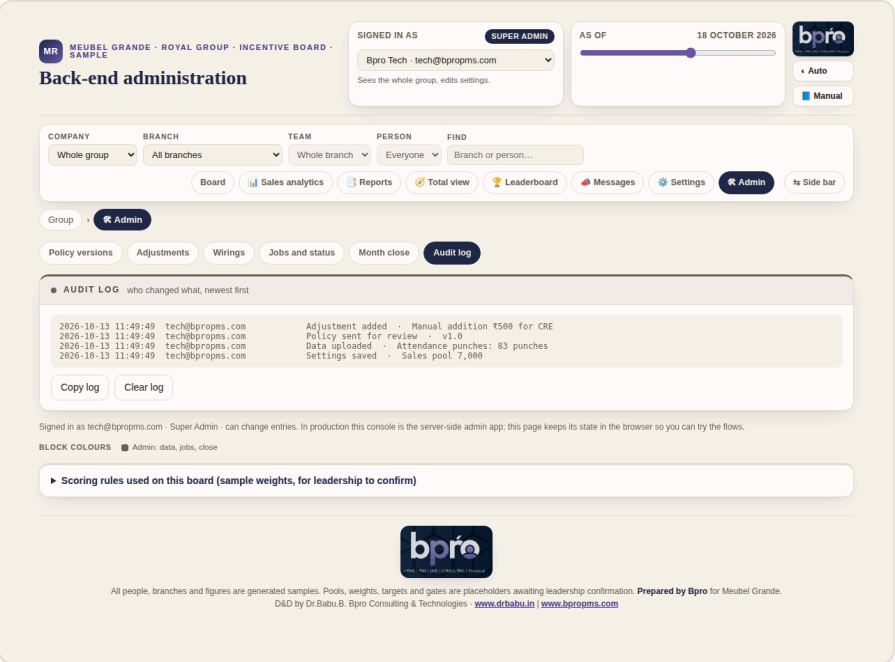

Figure 35. Audit log: every save, upload, user change, policy move, adjustment, wiring change, job run and close-step tick

Newest first, with a copy button for the auditor. In this preview the console keeps its state in the browser so the flows can be rehearsed end to end; in production it is the server-side admin app over the same tables, and the log is append-only: every entry records the signed-in person, and the application's own database login cannot edit, delete or empty it.

> 🔍 **LENS**
>
> Before any client review open Jobs and status: if the tiles are green and the pending count is zero, the numbers on every other page can be trusted.

11 Operating rhythm

📌 **STICKY NOTE**

The programme runs itself once the wirings are live. The humans in the loop are the SM and BM every evening, Accounts on the 1st, HR in the dispute window and the MD at approval.

Every day

TIME	WHAT HAPPENS	WHO ACTS
every 15 minutes	Billing / ERP and CRM sync; recompute	nobody
hourly	Biometric attendance and delivery app sync	nobody
through the day	people open their own page; managers open their branch	everyone
21:00	Daily SM WhatsApp and daily BM WhatsApp go out	SM and BM read, act on tomorrow's pushes
night	Accounts, Google Business Profile and audit sheets sync	nobody

Every week

DAY	WHAT HAPPENS	WHO ACTS
Monday 08:00	Weekly BM email with the leaderboards and four actions	BM with the SM in copy; Directors read the group version
Saturday 19:00	Weekly Sales, CRE, Logistics and Back office WhatsApps	team groups
any day	Admin reviews pending adjustments and the Jobs tiles	Admin

Every month

DATE	WHAT HAPPENS	WHO ACTS
1st 08:00	Personal summaries, monthly CRE message, MD monthly review, HR and payroll review	everyone receives
1st 09:00	Freeze; month close checklist opens	Admin
1st to 3rd	Accounts reconciles; adjustments approved or rejected	Accounts, approver
3rd	Statements sent to every employee	Admin
3rd to 10th	7-day dispute window; disputes logged in the ledger	HR, BM

DATE	WHAT HAPPENS	WHO ACTS
10th	MD approval email; payout file to payroll	MD, Admin, payroll
16th	MD mid-month preview	MD, Directors
before the 1st	any rule change for next month approved, communicated and made live	Admin, MD

> 🔍 **LENS**
>
> Jobs and status is the one page that shows whether the rhythm is being kept: a job with no *last run* on the day it should have run is the first thing to fix.

12 👑 Top management quick guide

📌 **STICKY NOTE**

Three numbers a month are enough: group achievement, outlay as a share of SO value, and the number of branches under **85%**. Everything else on the board explains those three.

What the MD reads

WHEN	WHERE	READ	DECIDE
any day	🌐 Group lens	achievement, chance, branches under the gates, group lags	which Director to call
16th	MD mid-month email	projection, watch list of branches heading under 85%	interventions with two weeks left
1st	MD monthly email	the closed month, outlay by role, policy health, the approval list	approve the payout, or send items to the ledger
before a rule change	🛠 Admin → Policy versions (via Admin)	the JSON diff and the note	approve the version

What a Director reads

WHEN	WHERE	READ	DECIDE
Monday	the group version of the weekly BM email	company branch leaderboard with movement	which branch to visit this week
any day	🏢 Company lens	branch pushes priced per day; company lags	where to put the week's attention
1st	MD monthly email (copied)	Meubel Grande against Royal Group	the month's review agenda

What HR reads

WHEN	WHERE	READ	DECIDE
1st	HR and payroll email	people under the attendance gate, chronic late or early, spotless attendance, grooming under 4	warnings, recognitions, regularisation requests
3rd to 10th	🛠 Admin → Adjustments (via Admin)	disputes and regularisations with status	resolve inside the window
any day	🏆 Leaderboard → Management	BM and SM pool status	coaching conversations

Five questions the board answers in under a minute

1. **Will we make the month?** Group lens, headline tile: expected against target, with the chance.
2. **What will it cost?** MD email or 🧭 Total: outlay and its share of SO value, by role.

3. **Which branch needs me?** Company lens: the lowest bar, and whether it is falling (▼) or climbing (▲).
4. **Is discount discipline holding?** Policy health: bills above 30%, forfeits to the 60% and 40% bands, discount against GP.
5. **Who should be recognised?** Leaderboard medals, top three per role, spotless attendance in the HR email.

What top management should never do on the board

- Change a weight or a pool mid-month to help one branch; use the ledger with an approver.
- Read a chance on the 5th as a forecast; it is a wide band until mid-month.
- Treat a provisional per-bill figure as earned; it is paid only on delivery and payment.

> 🎮 **GAMIFICATION FOR LEADERS**
>
> The most powerful recognition on the board is free: a Director quoting a branch's ▲ movement or a new badge in the Monday call. The badge wall on the group lens lists this month's holders by name.

13 ❓ FAQ

Q Why does my expected incentive change during the day?

Every sync re-computes the projection. A bill booked at 11:00 raises the expected SO value at the next 15-minute sync; a late punch lowers the attendance score at the next hourly sync.

Q My bill shows a lower incentive than the rate says.

Check the discount band. A 15% discount keeps 60% of the incentive, 25% keeps 40%, above 30% keeps nothing. The bill row on your page shows the band and the forfeited amount.

Q The bill is delivered. Why is it still provisional?

The policy pays on delivery and payment. Until Accounts records the payment the bill counts at 95%.

Q Why is my scorecard pay zero?

Attendance is under 85% for the month. The gate lifts as soon as the month's attendance climbs back over 85%, or when HR approves an attendance regularisation in the ledger.

Q The branch is at 101% but the team pool shows closed.

The audit score is under 70. Both conditions are needed.

Q The BM pool shows closed at 89%.

The management pool opens at 90% of branch target. The branch lens shows the rupees per day needed to cross it.

Q Why did my rank fall when my score rose?

Rank is relative. Others rose more. The movement arrow compares with seven days earlier on the board and with yesterday in the daily message.

Q Can a BM see another branch?

No. Scope is enforced; the selector bar offers only the BM's branch. Directors and the MD see all branches.

Q Who can change a weight or a pool?

Admin and Super Admin in ⚙️ Settings, then through a policy version that is approved and communicated before it goes live.

Q How do I correct a wrong punch or a wrong bill?

Not on the board. Correct it in the source system (biometric, ERP) and the next sync picks it up; or raise an adjustment or regularisation in the ledger with a reference.

Q The WhatsApp message and the board show different figures.

They never should: both read the same engine. Check the *as of* time in the message header against the board's last sync; a message sent at 21:00 is a snapshot of that moment.

Q Fetch now does nothing.

In the artifact sandbox outside calls are blocked. On the group's own server the fetch runs; see section 9.4.

Q Can we add an attribute?

Yes. It needs a source column, a target, a weight in each role that uses it and a rebalance of that role's column to 100. Raise it with the Bpro team; it ships as a new build and a new policy version.

Q Where is the data kept?

In production, on the group's server in the tracker tables. The sample build keeps settings and the admin console state in the browser so the flows can be rehearsed.

Q Is the 120% cap on the scorecard a bonus?

Achievement above target keeps earning scorecard points up to 120%, so a person at 115% of target earns more scorecard pay than one at 100%. Every other attribute caps at 100%.

14 🤔 RAQ: rarely asked questions

Q What happens on the 31st at 23:59?

Nothing dramatic. The projection equals the booked figure, the chance is 0% or 100%, and the month stays open for edits until the freeze at 09:00 on the 1st.

Q Why October 2026 in the sample?

The policy draft is dated 19 September 2026; the first full month it could run is October. The slider replays that month so every message can be rehearsed on a realistic calendar.

Q Is the sample data random?

It is generated from a fixed seed, so every reload shows the same people and figures. Nobody in it is real.

Q Can two people share a bill?

Not in the policy draft. A bill has one salesperson; the CRE who logged the walk-in earns the override from the company, not from the salesperson's share.

Q What if a CRE converts a walk-in that was never logged?

No override. The weekly CRE message lists *walk-ins not logged under a CRE* for exactly this reason.

Q Does a cancellation hurt Logistics?

Indirectly. A late or damaged delivery that leads to a cancellation removes the sale from Sales and the override from the CRE; the Logistics scorecard takes the on-time or damage miss. The weekly Logistics message carries that reminder.

Q Why 22% as the spread?

A placeholder from the sample's own variability. After three real months it should be set from the observed spread of mid-month projections against closed months.

Q Can the board run without Google reviews?

Yes. Set the branch source to sample or leave the column blank; the attribute scores at its default and the Total view flags the source as not connected.

Q What does the consultant team see that the MD does not?

The 🧭 Total view and the 🛠 Admin console: data feeds, wirings, policy versions, the ledger and the audit log. The MD sees the outcomes; Bpro sees the plumbing.

Q Could a branch game the walk-out ratio?

Only by logging fewer walk-ins, which lowers the CRE's own *walk-ins logged* score and shows up as unlogged walk-ins in the CRE message. The attributes are chosen to pull against each other.

Q Is dark mode just cosmetic?

Yes. The theme toggle in the header changes colours only.

Q Can we have the leaderboard on a TV in the branch?

The 🏆 Leaderboard at branch scope is a single page that refreshes with every sync; sign in a display user with the BM role and leave it open.

Q Who wrote the policy rules into the engine?

Team Bpro, from the Corporate Incentive Structure draft, with every value exposed in Settings so that leadership, not the code, owns the numbers.

15 📌 Sticky notes, troubleshooting, glossary, version history, colophon

The ten sticky notes

1. 📌 One engine, one figure: board, message and statement never differ.
2. 📌 Scorecard pay = pool × score ÷ 100. Attendance under 85% makes it zero.
3. 📌 Per-bill incentive is paid on delivery and payment only. Cancellation pays nothing.
4. 📌 Discount bands: 12% full, 20% at 60%, 30% at 40%, above 30% nothing.
5. 📌 Management pool opens at 90%; team pool at 100% with audit 70.
6. 📌 The chance is a band that narrows every day; do not read it as a forecast before mid-month.
7. 📌 Scope is enforced; the selector bar only offers what the role may open.
8. 📌 Rules change through a policy version: approved, communicated, then live.
9. 📌 Corrections go to the source system or the ledger, never to a Settings field.
10. 📌 Jobs and status green and pending adjustments zero = the numbers can be trusted.

Troubleshooting

SYMPTOM	LIKELY CAUSE	FIX
A person is missing from a team	not on the roster, or role spelt differently	fix the roster export; press **Copy roster** to see the ids the board knows
Upload says *0 applied*	names do not match, or the first two columns are missing	use the template header; match names to the roster
A weight column refuses to save	total is not 100	rebalance until the total reads 100 / 100 in green
Make live is refused	version not approved or not marked communicated	complete the workflow in Policy versions
Month close step 3 is blocked	pending items in the ledger	approve or reject each one
Fetch now fails	page is in the sandbox, or endpoint or secret name wrong	host on the group's server; test the wiring in Admin
A message shows yesterday's figures	the send ran before the last sync	check the job order in Jobs and status; the sync runs first
The board looks empty after a reset	the browser state was cleared	Super Admin resets to policy defaults; re-upload or re-fetch sources
Figures look odd after a settings change	a draft value is being tried	load the live policy version to compare; the audit log shows what changed
A notice says a setting *was also changed by* someone	two people saved within moments of each other	nothing is lost: both changes were merged; check the result after the reload

SYMPTOM	LIKELY CAUSE	FIX
Updated by another user appears	someone else saved while your screen was open	press **Reload now** before editing further
Microsoft sign-in is refused	the account is outside the company's tenant, or not on the profiles table	sign in with the company account; ask the administrator to add the email
Too many requests	many sign-in attempts or refreshes from one address in a minute	wait a minute and try again
The QR code shows text, not a web page	the document was made outside the group's server (sample or claude.ai copy)	expected: the text carries the ID and fingerprint; online verification needs the hosted board
The verification page says *does not match*	the document was edited after it was issued	ask the issuer for a fresh copy; treat the one in hand as altered
The verification page says *No such document*	the ID was mistyped or never issued by the board	scan the code rather than typing; otherwise treat the document as not genuine
PDF does nothing inside the claude.ai viewer	the viewer's frame blocks the print dialog	save the print-ready copy the board offers, open it, and print or save as PDF
A Branch Manager sees only one branch in rankings	client roles receive their own branch only	expected; group-wide ranks are in the messages and on the leadership views

Glossary

TERM	MEANING
SO value	sale order value booked, net of discount
Achievement	SO value ÷ target, pro-rated to the day for the scorecard
Attainment	an attribute's value against its target, 0 to 100% (achievement to 120%)
Scorecard	the weighted sum of attainments, out of 100
Pool	the monthly rupee amount a role's scorecard is paid against
Gate	a condition that closes a payout: attendance 85, management 90, team pool 100 and audit 70
Band	a discount range with the share of per-bill incentive it keeps
Category	a bill's list-price class: A, B or C, each with a rate
Override	the CRE's 10% of the sales incentive on walk-ins they logged
Provisional	counted at a probability until delivered and paid
Chance	probability that the projection lands above target
Push	an action priced in rupees
Lag	an attribute costing points, priced in rupees
Movement	rank now against seven days earlier (board) or yesterday (daily message)
Ledger	the adjustments register in the Admin console
Policy version	a named snapshot of every Settings value with a workflow state

TERM	MEANING
Wiring	an integration: data feed, channel or sign-on
BM, SM, BI, CRE	Branch Manager, Sales Manager, Branch In-charge, Customer Relationship Executive

Version history

VERSION	DATE	WHAT CHANGED
1.0	3 October 2026	first release of the manual, matching the sample build with roles, Total view, Admin console, messages matrix and data inputs
1.1	3 October 2026	board audit fixes (document skeleton, stale-state sanitiser, labels, workflow); badge ladder and badge wall built in; manual section 6.3 updated
1.2	3 October 2026	month history and archive, printable statements, payout file and ledger exports, leaderboard export and TV mode; manual sections 5.3, 6.2 and 10.7
1.5	13 October 2026	brand and verification release: the Bpro logo on the board, the sign-in screen, every report, statement, Excel file and e-mail; a QR code, document ID and SHA-256 fingerprint on every download with a public verification page on the server; page numbers on printed pages; a warm palette (ivory, warm charcoal, Bpro navy and violet, terracotta and saffron) with WCAG AA contrast; refreshed screenshots; manual section 2 and troubleshooting
1.4	12 October 2026	audit release: production sign-in hardening (company tenant, verified email, sign out on every device, rate limits), branch-scoped data for client roles, versioned saves that merge two people's changes, a restricted database login, messages once per run and the monthly round on the closed month, inbox safeguards; report fixes (products by category, months archived before 1.3, people who moved branch, years in financial-year mode), PDF reports in column sections, A4 statements with the footer, keyboard focus kept in the builder; manual sections 2, 3, 7, 8.6, 9, 10 and troubleshooting
1.3	12 October 2026	Reports window (measures across months, quarters, calendar and financial years in one Excel, PDF or CSV output); subtotals and grand totals on the board's tables; the D&D footer with its links on every report, statement, export and email; manual section 2

Colophon

Incentive board: settings manual cum user manual. Designed and developed by **Dr. Babu B.**, Team Bpro Consulting & Technologies, for Meubel Grande and Royal Group. www.drbabu.in · www.bpropms.com. Every report, statement, export and email the board produces carries the Bpro logo, a QR code to verify it (the payout file excepted) and the line *D&D by Dr.Babu.B. Bpro Consulting & Technologies · www.drbabu.in | www.bpropms.com*, with both addresses as links. Screenshots are from the sample build of 3 October 2026; names, branches and figures are generated. The policy values quoted are the 19 September 2026 draft's placeholders until leadership confirms them in Settings.

🎮 **LAST NOTE**

A programme people check every evening beats a policy people read once a year. The board exists to make the second into the first.
